VDM TABLE OF CONTENTS
DEVON ENERGY
5BLUE PROJECT: 5B1108

A. MECHANICAL

- A2 Dimensional Outline, Layout & Mounting Drawings (includes Locations & Details of base plate and anchor bolt, etc.)
- A3 List of Connections by Buyer including Detailed Location (Piping, Seal Flush, Testing, Electrical, Instrumentation, etc.)
- A4 Plans, Sections, Detailed Drawings with Bills of Materials
- A5 Piping Isometric Drawings with Bills of Materials with P.Eng Stamp
- A7 Structural Steel Drawings (Skid, Pipe Supports, Platforms, Buildings, etc.)
- A8 Supports or Foundation Load Diagram
- A9 Shipping Weights and Dimensions
- A10 Lifting Diagram / Instruction
- A11 Centre of Gravity of Each Lift
- A13 Facsimile of Nameplate Stamping
- A14 Datasheet for major equipment
- A18 As-Built Clearances
- A26 Cathodic protection system design & layout
- A30 3D Model including Native File(s)
- A31 Detail Fabrication Drawings

B. QA/QC RECORDS

- B1 Hydro-test Certificate
- B2 Hydro-test Chart
- B3 PWHT Certificate
- B4 PWHT Records & Charts
- B5 Radiography Reports
- B6 Magnetic Particle Inspection Reports
- B7 Liquid Penetrant Inspection Reports
- B8 Hardness Testing Report
- B9 Impact Testing Report
- B10 External Coating System, Surface Prep, Installation, Holiday and DFT Inspection Reports
- B11 Internal Coating System, Surface Prep, Installation, Holiday and DFT Inspection Reports
- B12 Weld Maps

B13 Certified Welding Procedure Specifications (WPS)
B14 Certified Mill Test Reports
B15 Function Test Report
B16 Third Party Supplier Inspection Reports
B18 Code Registration Certificate
B19 Hydrostatic Testing Procedure
B20 Copy of Quality Program
B21 Inspection and Test Plan (Inc. Sign-off Record)
B30 Weld Procedure Qualification Record (WPQR)
B31 Non-Destructive Exam Procedures (NDE)
B33 Weld Repair Procedure
B34 Contractor Certifications (Quality System Cert. eg. ISO 9001, ASME Sect VIII DIV 1, 2 and/or 3, Provincial CSA B51, ASME B31.3, CWB, AWS etc.)
B36 Shop & Field Positive Material Identification (PMI) Results
B37 UT Report
B38 Shop Dry Out Procedure
B40 Insulation and Jacketing Inspection and Acceptance Report
B42 NDE / NDT Test Reports (not mentioned elsewhere)
B46 Welder Log & Statistics
B54 PSV Shop Pop & Blowdown Test Records
B55 Non-Conformance Reports (NCR)

C. CALCULATION

C1 Vessel Mechanical Design (Including Nozzle Repad, Vessel Support, and Local Stress Calculations)
C2 Piping Flexibility / Stress (Including Locations of Piping Anchor / Guide Points)
C7 PSV Sizing Basis and Calculations (Incl. Rupture disks if applicable)
C8 Control Valve Sizing
C9 Skid Design Calculations
C10 Process Design Calculations (CPU Loading calcs)
C19 Relief Load Calculations
C23 Flowmeter Sizing Calculation
C27 Insulation and Selling Thickness Calculation Including Heat Loss and Skin Temperature
C28 Vessel Lifting Lug Calculation Including Vessel Load Stress
C32 Thermowell Stress and Wake Frequency Calc
C33 HVAC Design Calculation
C34 Enclosure Ventilation System Calculation

D. ELECTRICAL

- D1 Termination Drawings
- D10 Instrument / F&G Installation Details
- D20 Electrical Equipment SELLER Drawings
- D21 Equipment Seller Catalogue Sheets
- D23 Junction box detail drawings
- D24 Equipment wiring diagram
- D25 Motor datasheet
- D30 Electrical Bills of Material

E. INSTRUMENTATION

- E5 Wiring Diagrams
- E6 ISA Datasheet for each item including Manufacturer and Model No
- E13 Instrument Calibration Test Record
- E16 Instrument Seller Catalog Information
- E21 Instrument Index
- E22 PSV Certificate of Compliance
- E23 Certified Dimensional Drawings
- E26 Tubing Schematic
- E29 Canadian Registration Number (CRN) Certificate

F. OTHER DOCUMENTATION

- F3 Recommended Spare Parts with Prices for Start-up
- F4 Recommended Spare Parts with Prices for 2 Years' Operation
- F6 Installation, Operation & Maintenance Manual
- F9 Approval Agency Documents, Certificates & Labels as Applicable (e.g. Electrical equipment cert for Hazardous Area)
- F11 CRN Number(s) from Local Authority having Jurisdiction all for Pressure Equipment, Piping and Fittings as per CSA B.51 Code
- F14 Preservation and Storage Procedure
- F15 Piping and Instrumentation Diagrams
- F16 Troubleshooting Chart
- F19 Lube Oil/Operating Fluids Schedule
- F20 Release for shipping certificate
- F23 Trade Personnel Qualifications
- F24 Local authority having jurisdiction certificate of package electrical installation per CSA Area classification

F25 Data Book & IOM Manual Index
F26 Line Designation Table
F27 Utility consumption list (including instrument air and electricity, UPS, Heating or Cooling Medium etc.)
F28 Equipment Storage & Preservation Records
F29 Compliance Statement-That the Supplier confirms complete compliance with the Requisition and referenced documents or lists specific deviations and exceptions

NOTES

1) ALL PRIMARY DIMENSIONS ARE IN INCHES AND ALL SECONDARY DEMENSIONS ARE IN MILLIMETERS 0'-0" [000].
2) TOP OF CHECKER PLATE REFERENCE ELEVATION 0'-0" [000].
3) ALL FABRICATION SHALL BE CARRIED OUT IN CWB APPROVED FABRICATION SHOPS AND MUST CONFORM TO CURRENT 2003 CSA W47 AND W59. ALL WELD MATERIAL SHALL BE CSA STD W48 SERIES APPROVED. FOR QUALITY OF WELD, REFER TO COMPANY CWB WELDING CERTIFICATION UNDER NUMBER 150-2/SUBCONTRACTOR.
4) FOR SANDBLASTING NOTES SEE E&IL 5B1108-02-EL-00-001
5) FOR PAINT NOTES SEE E&IL 5B1108-02-EL-00-001
6) MATERIAL SUBSTITUTIONS TO LOAD BEARING STRUCTURAL COMPONENTS SHALL BE SUBJECT TO ENGINEERING APPROVAL.
7) TOTAL APPROXIMATE OVERHEAD STRUCTURAL STEEL MASS: 7150 lbs (3250 kg).
8) REFER TO DWG# 5B1108-02-DR-11-002 FOR PLAN VIEW – 10'-0" T.O.S. & ABOVE.
9) REFER TO DWG# 5B1108-02-DR-11-003-005 FOR ELEVATION VIEWS.
10) REFER TO DWG# 5B1108-02-DR-11-006 FOR FOR BRACINGS AND PLATES DETAILS
11) REFER TO DWG# 5B1108-02-DR-11-007 & 008 FOR PLATFORM & LADDER DETAILS
12) REFER TO DWG# 5B1108-02-DR-11-009 FOR ISO VIEWS.

GENERAL NOTES:

1) ALL DIMENSIONS AND ELEVATIONS ARE IN IMPERIAL UNLESS OTHERWISE SPECIFIED.
2) REFER TO 5B1108-02-DR-80-000-1 FOR PIPE SUPPORT DRAWINGS.
3) SPOOL TO BE BUILT IN ACCORDANCE WITH ASME PRESSURE PIPING CODE B31.3, 2010 EDITION.
4) ALL FLANGE BOLT HOLES TO STRADDLE CENTER LINES (UNO).
5) THIS ISOMETRIC IS TO BE READ IN CONJUNCTION WITH DEVON NEC CORPORATION GS-5210 PIPING CLASS SPECIFICATIONS.
6) PIPING SPEC A13 IS TO SUPERCEDE A11 FOR ALL SMALL BORE VENTS, DRAINS AND INSTRUMENT CONNECTIONS AS PER 5BLUE RFI #4.
7) HYDRO TEST TO BE CHARTED FOR 1 HR.
8) 1/8" WELD GAP HAS BEEN TAKEN INTO ACCOUNT FOR ALL BW AND SW CONNECTIONS.
9) SHOP TO VERIFY ALL DIMENSIONS AND ELEVATIONS AND COORDINATES PRIOR TO FABRICATION.
10) JOINT NON-DESTRUCTIVE EXAMINATION:
ALL JOINT: 20% VISUAL, BW: 10% RT, SW: 5% RT(FIT-UP) + 10% MT, FILLET WELDS: 10% MT.

GENERAL NOTES:

1) ALL DIMENSIONS AND ELEVATIONS ARE IN IMPERIAL UNLESS OTHERWISE SPECIFIED.
2) REFER TO 5B1108-02-DR-80-000-1 FOR PIPE SUPPORT DRAWINGS.
3) SPOOL TO BE BUILT IN ACCORDANCE WITH ASME PRESSURE PIPING CODE B31.3, 2010 EDITION.
4) ALL FLANGE BOLT HOLES TO STRADDLE CENTER LINES (UNO).
5) THIS ISOMETRIC IS TO BE READ IN CONJUNCTION WITH DEVON NEC CORPORATION GS-5210 PIPING CLASS SPECIFICATIONS.
6) PIPING SPEC A13 IS TO SUPERCEDE A11 FOR ALL SMALL BORE VENTS, DRAINS AND INSTRUMENT CONNECTIONS AS PER 5BLUE RFI #4.
7) HYDRO TEST TO BE CHARTED FOR 1 HR.
8) 1/8" WELD GAP HAS BEEN TAKEN INTO ACCOUNT FOR ALL BW AND SW CONNECTIONS.
9) SHOP TO VERIFY ALL DIMENSIONS AND ELEVATIONS AND COORDINATES PRIOR TO FABRICATION.
10) JOINT NON-DESTRUCTIVE EXAMINATION:
ALL JOINT: 20% VISUAL, BW: 10% RT, SW: 5% RT(FIT-UP) + 10% MT, FILLET WELDS: 10% MT.

TOTAL WEIGHT-THIS DWG 10.0

GENERAL NOTES:

1) ALL DIMENSIONS AND ELEVATIONS ARE IN IMPERIAL UNLESS OTHERWISE SPECIFIED.
2) REFER TO 5B1108-02-DR-80-000-1 FOR PIPE SUPPORT DRAWINGS.
3) SPOOL TO BE BUILT IN ACCORDANCE WITH ASME PRESSURE PIPING CODE B31.3, 2010 EDITION.
4) ALL FLANGE BOLT HOLES TO STRADDLE CENTER LINES (UNO).
5) THIS ISOMETRIC IS TO BE READ IN CONJUNCTION WITH DEVON NEC CORPORATION GS-5210 PIPING CLASS SPECIFICATIONS.
6) PIPING SPEC A13 IS TO SUPERCEDE A11 FOR ALL SMALL BORE VENTS, DRAINS AND INSTRUMENT CONNECTIONS AS PER 5BLUE RFI #4.
7) HYDRO TEST TO BE CHARTED FOR 1 HR.
8) 1/8" WELD GAP HAS BEEN TAKEN INTO ACCOUNT FOR ALL BW AND SW CONNECTIONS.
9) SHOP TO VERIFY ALL DIMENSIONS AND ELEVATIONS AND COORDINATES PRIOR TO FABRICATION.
10) JOINT NON-DESTRUCTIVE EXAMINATION:
ALL JOINT: 20% VISUAL, BW: 10% RT, SW: 5% RT(FIT-UP) + 10% MT, FILLET WELDS: 10% MT.

NOTES:

1) ALL PRIMARY DIMENSIONS ARE IN INCHES AND ALL SECONDARY DEMENSIONS ARE IN MILLIMETERS 0'-0" [000]
2) TOP OF CHECKER PLATE REFERENCE ELEVATION 0'-0" [000].
3) ALL FABRICATION SHALL BE CARRIED OUT IN CWB APPROVED FABRICATION SHOPS AND MUST CONFORM TO CSA W47.1-09 AND CSA W59-03. ALL WELDS SHALL BE E7018 AND CONFORM TO CSA W48.1-M. FOR QUALITY OF WELD, REFER TO COMPANY CWB WELDING CERTIFICATION UNDER NUMBER 150-2/ SUBCONTRACTOR.
4) CHECKER PLATE SEAMS TO BE SEAL WELDED.
5) CHECKER PLATE PERIMETER TO BE STITCH WELDED.
6) CHECKER PLATE TO BE STITCH WELDED TO ALL SUPPORTS.
7) ALL GRATING TO BE BANDED AS REQUIRED & HOT DIP GALVANIZED.
8) DO NOT WELD GRATING. SHOP TO USE CLIPS THAT DO NOT HARM THE GALVANIZED FINISH.
9) FOR SANDBLASTING NOTES SEE E&I# 5B1108-02-EL-00-001
10) FOR PAINT NOTES SEE E&I# 5B1108-02-EL-00-001.
11) UNDERSIDE OF SKID TO RECEIVE 4" OF CLASS ONE URETHANE FOAM INSULATION.
12) SKID MUST BE ADEQUATELY SUPPORTED BY THE CUSTOMER IN THE FIELD.
13) MATERIAL SUBSTITUTIONS TO LOAD BEARING STRUCTURAL COMPONENTS SHALL BE SUBJECT TO ENGINEERING APPROVAL.
14) ALL BOLTING TO BE ASTM A325 AND A563DH MATERIAL.
15) LIFT LUG MATERIAL TO BE CSA G40.21-44WT CAT4. MINIMUM YIELD STRENGTH FOR LIFT LUGS = 44,000 PSI.
16) TOTAL APPROXIMATE BARE SKID MASS: 13 750 lbs (6250 kg).
17) REFER TO DRAWING 5B1108-02-DR-10-002 FOR PILE LOCATION AND LOADS.
18) REFER TO DRAWING 5B1108-02-DR-10-003 FOR CHECKER PLATE CUTOUT AND BASE PLATE DETAILS.
19) LIFT LUGS DESIGNED FOR VERTICAL LIFTS ONLY.

NOTES:

1) ALL DIMENSIONS ARE IN IMPERIAL, UNLESS OTHERWISE SPECIFIED.
2) DETERMINATION OF PILE LOADS IS BASED ON ELASTIC ANALYSIS AND NOT PLASTIC ANALYSIS.
3) PILE LOADS HAVE BEEN DERIVED BASED ON THE MAJOR INDIVIDUAL COMPONENT CENTRE OF GRAVITY. THE MAJOR INDIVIDUAL (OPERATING) COMPONENTS CONSIDERED FOR PILE LOAD DETERMINATION ARE:
   A) VESSEL
   B) BUILDING
   C) SKID
   D) PIPING
   E) OHS
   F) PLATFORMS
   G) VALVES
   H) HEATERS
4) THE MAXIMUM DEFLECTION AT ANY POINT ON THE 5B1108 SKID IS TBD.
5) LIVE LOAD IS BASED ON 100 lb/ft² (4.8 kPa).
6) SEISMIC HORIZONTAL SHEAR LOADING IS BASED ON TOTAL OPERATING LOADS.
7) WIND HORIZONTAL SHEAR LOADING IS BASED ON A WIND LOAD OF 0.5 kPa. (BASED ON SITE CONDITIONS)
8) THE FINAL DRY WEIGHT OF THE CARDIUM GAS SEPARATOR PACKAGE (5B1108) IS 50 500 lb.
9) THE FINAL OPERATING WEIGHT OF THE CARDIUM GAS SEPARATOR PACKAGE (5B1108) IS TBD.
10) THIS OPERATING PILE LOAD DIAGRAM IS TO BE STAMPED BY AN ALBERTA PROFESSIONAL ENGINEER.

ALMAC WALL PANEL

TRIM COLOURS:

-GABLE FLASHING AND ALL NOTED FLASHINGS ARE TO BE FORMED FROM 8000 SERIES PREPAINTED STEEL MATERIAL, TO COLOUR: SLATE BLUE (QC-8260)

ACCESSORIES:

(A) TWO ONLY 3'-0" x 7'-0" STEEL INSULATED EXTERIOR WALK-IN DOOR C/W HARDWARE AS FOLLOWS:
*DOOR LEAF-16ga. STEEL 45mm THK POLY-URETHANE CORE (R12)
*DOOR FRAME-16ga. PRESSED STEEL (KNOCKDOWN)
*BUTT HINGES (3)-"STANLEY" #BB1409 x 114x102 x 26D
*PANIC HARDWARE-"VON DUPRIN" #44TP
*LOCK CYLINDER-"DOREX" #501 KA x C26D
*HYDRAULIC CLOSURE-"SHANAHANS" SH-1003-BCX x 689
*GLASS-24" x 24", DOUBLE GLAZED I.W.G.
*CHECKCHAIN-"CANAROPA" #3548
*THRESHOLD-"PEMKO" #1700A (ALUMINUM)
*WEATHERSTRIP-"PEMKO" #306AV (ALUM./VINYL)
*SWEEP-"PEMKO" #315CN (ALUM./NEOPRENE)
*22ga. SHEETMETAL CANOPY, TO COLOR: STONE GREY (QC-8305)

DOOR LEAF FINISH: SLATE BLUE (QC-8260)
DOOR FRAME FINISH: SLATE BLUE (QC-8260)

(B) TWO ONLY 2'-8" WIDE x 3'-0" HIGH (NOM. SIZE), DOUBLE GLAZED ALUMINUM SLIDING WINDOW C/W LOCK AND FIBERGLASS CLOTH HALF SCREEN AND PLAIN GLASS.
FRAME FINISH: MILL FINISH ALUMINUM

(C) TWO ONLY 20'-0" LONG, EAVESTROUGHING ASSEMBLIES C/W ONE DOWNSPOUT ASSEMBLY PER SIDE.
EAVESTROUGH FINISH: SLATE BLUE (QC-8260)
DOWNSPOUT FINISH: STONE GREY (QC-8305)

(D) TWO ONLY 20'-0" LONG CONTINUOUS ROOF ICE RAKES ASSEMBLIES.
FINISH: TO MATCH ROOF PANELS

HVAC EQUIPMENT:

(E) ONE ONLY 2'-0" WIDE x 2'-0" HIGH, PARALLEL BLADE ALUMINUM DAMPER, "WESTVENT" MODEL NO. PBX-4L6 C/W FLANGE FRAME, "BELIMO" 120V MODEL NO. NFBUP-S ACTUATOR, "BELIMO" MODEL NO. ZS260 EXPLOSION PROOF ENCLOSURE AND STORM HOOD W/ BIRDSCREEN.
HOOD FINISH: STONE GREY (QC-8305)

(F) TWO ONLY WALL MOUNTED EXPLOSION PROOF EXHAUST FAN, "RUFFNECK" MODEL NO. EFX-12A-2H, C/W 575V/60hz/3ph, 1/2hp T3B MOTOR, BACKDRAFT DAMPER, GUARDS, TERMINAL BOXES AND STORM HOOD W/ BIRDSCREEN. (CLASS I DIV 1 & II GROUP C & D) (FAN IS CAPABLE OF 850cfm)
HOOD FINISH: STONE GREY (QC-8305)

(G) ONE ONLY 70KW GLYCOL UNIT HEATER, "RUFFNECK" MODEL NO. AH-20A-A5, C/W 575V/60hz/3ph EXPLOSION PROOF MOTOR AND REMOTE THERMOSTAT (CLASS I DIV 1 & II GROUP C & D)

FORM U-1A MANUFACTURER'S DATA REPORT FOR PRESSURE VESSELS (A627060

(Alternative Form for Single Chamber, Completely Shop or Field Fabricated Vessels Only)

As Required by the Provisions of the ASME Boiler and Pressure Vessel Code Rules, Section VIII, Division 1

1. Manufactured and certified by 5Blue Process Equipment Inc. 2303-8th Street, Nisku Alberta, Canada, T9E-7Z3
(Name and address of Manufacturer)

2. Manufactured for DEVON NEC CORPORATION. #400, 3 Ave Suite 2000 Calgary, Alberta T2P 4H2, Canada
(Name and address of Purchaser)

3. Location of installation Ferrier Central Processing Facility Central Oil Battery – Separation and Treatment LSD: 11-02-038-08W5M
(Name and address)

4. Type:

Vertical	5B1108-20	W2983.2	5B1108-02-DR-20-001 Rev.7	N/A	2013
(Horizontal or vertical, tank)	(Manufacturer's serial number)	(CRN)	(Drawing number)	(National Board number)	(Year built)

5. The chemical and physical properties of all parts meet the requirements of material specifications of the ASME BOILER AND PRESSURE VESSEL CODE. The design, construction, and workmanship conform to ASME Rules, Section VIII, Division 1 2010 edition (Year)

to 2011a ([Addenda, if applicable (Date)]) n/a (Code Case numbers) n/a ([Special Service per UG-120(d)])

6. Shell

SA-51670N	0.625"	0.125"	66" ID	12'-0"S/S
(Material spec. number, grade)	(Nominal thickness)	(Corr. Allow.)	(Inner diameter)	[Length (overall)]

7. Seams:

CERTIFICATE OF SHOP/FIELD COMPLIANCE

We certify that the statements made in this report are correct and that all details of design, material, construction, and workmanship of this vessel conform to the ASME BOILER AND PRESSURE VESSEL CODE, Section VIII, Division 1. "U" Certificate of Authorization Number 40,338 Expires February 4 , 2014

Date 17-Oct-2013 Co. name 5Blue Process Equipment Inc. (Manufacturer) Signed Joelle Dery-Brochu (Representative)

CERTIFICATE OF SHOP/FIELD INSPECTION

Vessel constructed by 5Blue Process Equipment Inc. at 2303, 8th Street Nisku, Alberta

I, the undersigned, holding a valid commission issued by the National Board of Boiler and Pressure Vessel Inspectors and/or the State or Province of Alberta and employed by ABSA have inspected the component described in this Manufacturer's Data Report on 17-Oct-2013, and state that, to the best of my knowledge and belief, the Manufacturer has constructed this pressure vessel in accordance with ASME BOILER AND PRESSURE VESSEL Code, Section VIII, Division 1. By signing this certificate neither the Inspector nor his/her employer makes any warranty, expressed or implied, concerning the pressure vessel described in this Manufacturer's Data Report. Furthermore, neither the Inspector nor his/her employer shall be liable in any manner for any personal injury or property damage or a loss of any kind arising from or connected with this inspection.

Date 17-Oct-2013 Signed (Authorized Inspector) Commissions NB14446A, AB422 [National Board (incl endorsements), State, Province and number]

PRESSURE PIPING CONSTRUCTION AND TEST DATA REPORT

In accordance with the provisions of the PESR Section 31(1)

Shop Construction ☒; **Field Construction** ☐;
Final Data Report ☒; **Partial Data Report** ☐ (from one ABSA- authorized Contractor to another ABSA- authorized Contractor).

Complete both sides of this Form

1. Constructed By: 5 Blue Process Equipment Inc Owner's Job No: 01-00348.01
(Name of ABSA authorized primary contractor or subcontractor)
2303 - 8th Street, Nisku, Alberta, CANADA, T9E 7Z3
(Address)
Certificate of Authorization Permit No. AQP-1507 Expiry Date: February 4th,2017

2. Constructed For:
(Name of primary contractor if different from above)
(Address)
Certificate of Authorization Permit No. AQP-N/A Expiry Date: N/A
(Required when the primary contractor undertakes some/all of the quality functions, e.g., NDE, PWHT, Tie-in, fabrication, hydro test, final assembly etc.)

3. Owner: DEVON NEC CORPORATION.#400.3 Ave suit 2000 Calgary, Alberta T2P 4H2, Canada
(Name and address)
LSD 11-02-038-08 W5M
(Location of installation)
Certificate of Authorization Permit No. AQP- N/A Expiry Date: N/A
(Required when the owner undertakes some/all of the quality functions, e.g., NDE, PWHT, Tie-in, fabrication, hydro test, final assembly etc.)

4. Piping Design Alberta Registration No.: PP-N/A
(Required if aggregate piping volume is over 0.5m^3)

5. Design Responsibility: Owner ☒; Contractor ☐

6. WP No.: WP-3146.2 ; Company: 5Blue Process Equipment Inc. Owner's WP No. (If used): WP-N/A
(Alberta Registration No.) (Alberta Registration No.)
WPS No(s). used: 5B-102 aw/pwht, 5B-103 aw/pwht ; Owner's WPS No(s). (If used): N/A

7. Code: ASME B31.1 Non Boiler External Piping ☐; ASME B31.1 Boiler External Piping ☐;
B31.5 ☐; B31.9 ☐; CSA Z662 Steam Pipelines ☐;
ASME B31.3 ☒ - Service Category: Normal ☒, D ☐, M ☐, High Pressure ☐; Severe Cyclic Condition ☐

Model# AH-20A-A5A1-A1-2H

Customer: ALMAC METAL INDUSTRIES

Job Ref.: 5 BLUE 13691

Date: MAY 28 2013

Comments: 1 - AH-20A-A5A1-A1-2H
60 Weight Tri Ethylene Glycol Heater
c/w XT312 Thermostat and Basic Mounting Kit

General Specifications

Approvals	CRN 0H1903.2 - Steam and HVAC liquids only.
Fan	3 blade aluminum, steel spider and hub with 5/8" bore.
Fan Guard	2 piece design with close wire spacing. 3/8" diameter probe will not enter. Epoxy coated to match cabinet colour.
Mounting Holes	9/16" diameter holes, two at top and two at the bottom of heater.
Louver Blades	Anodized extruded aluminum.
Header material	3/16" (4.8mm) carbon steel.
Max Operating Press.	450 psi.
Max Operating Temp.	650°F

*At 70°F and sea level

Model Specifications

(1) Finned Tubes

☒ (A) 5/8" outside diameter (16-gauge, 0.065" wall thickness) carbon steel tubes. Tension wound aluminum fins @ 10 per inch.
☐ (B) 1" outside diameter (14-gauge, 0.083" wall thickness) carbon steel tubes. Extruded aluminum fins @ 9 per inch.
☐ (C) 1" outside diameter (10-gauge, 0.135" wall thickness carbon steel tubes. Extruded aluminum fins @ 5 per inch, only available for single-pass (steam) models.

(2) Tubeside Passes

☐ (1) 1-Pass
☐ (3) 3-Pass
☒ (5) 5- Pass

(3) Fluid Connections

☒ (A) 1 ½" NPT male Sch. 40
☐ (B) 1 ½" 300# RF Flanges

(4) Exchanger Coatings

☒ (1) Heat Resistant aluminum paint
☐ (2) Heresite® phenolic coating

(5) Cabinet Material

14-gauge (0.075") steel

☒ (A) Epoxy Coated with 5 stage pretreatment, including iron phosphate.
☐ (B) Heresite® phenolic coating

(6) Motor

CSA certified and/or UL Listed, 1725 rpm, permanently lubricated ball bearing type with rigid base. All 50 and 60 hertz standard voltages available.

☐ (1) General Purpose
☒ (2) Explosion-Proof

(7) Motor Electrical Specs

☐	(A)	115 volts	1 phase	60 hertz
☐	(B)*	208 volts	1 phase	60 hertz
☐	(C)*	208 volts	3 phase	60 hertz

Defender®
Explosion-Proof Thermostats

Defender® Explosion-Proof Thermostats

Ruffneck™ Defender® explosion-proof, heavy-duty thermostats are the smallest, lightest, and most durable thermostats available. They are designed to control heating only, cooling only, or ventilation systems in demanding industrial applications. These include oil refineries, petrochemical plants, pulp and paper mills, coal mines, grain elevators, hazardous waste storage facilities, and other hazardous locations where specific explosive gases or dusts are present.

For hazardous-location temperature controls, rely on Defender® Thermostats for the most dependable, trouble-free service available. The Defender® Thermostat's unique and highly engineered design offers outstanding features and benefits.

More Features...More Benefits:

- all-aluminum exterior
- no breakable external plastic parts
- no exposed copper or brass
- corrosion resistant, suitable for H2S environments
- compact & lightweight
- more competitively priced
- CFC & mercury free
- environmentally safe, no leveling required
- 3-year warranty longest trouble-free warranty in the industry
- precision die-cast components
- greater consistency, better quality
- bimetal sensing element
- fast-acting, reliable, unaffected by altitude
- no delicate coils or bellows
- rugged reliability
- 480 VAC max.
- wider range of applications

Specifications

Temperature range: 36°F to 82°F (2°C to 28°C)
Temperature differential: 2.5°F (1.5°C)
Net weight: 2.1 lbs. (0.95 kg)
Switching: Snap acting
Conduit opening: 3/4" - 14 NPT
Enclosure: NEMA Type 7 & 9

Electrical Rating

22 Amps Res., 480 VAC Max.;
1/2 HP @ 125 VAC, 1 HP @ 250 VAC
Class I, Divisions 1 & 2, Groups C & D;
Class II, Division 1, Groups E, F, & G;
Class II, Division 2, Groups F & G; Class III;
Class I, Zones 1 & 2, Groups IIA & IIB

Approvals

UL Listed & C.S.A. Certified

NFBUP, NFBUP-S, NFXUP, NFXUP-S

On/Off, Spring Return, 24 to 240 VAC

Torque min. 90 in-lb, for control of air dampers

Application

For On/Off, fail-safe control of dampers in HVAC systems. Actuator sizing should be done in accordance with the damper manufacturer's specifications. Control is On/Off from an auxiliary contact, or a manual switch.

The actuator is mounted directly to a damper shaft up to 1.05" in diameter by means of its universal clamp. A crank arm and several mounting brackets are available for applications where the actuator cannot be direct coupled to the damper shaft.

Operation

The NFB and NFX series actuators provide true spring return operation for reliable fail-safe application and positive close off on air tight dampers. The spring return system provides constant torque to the damper with, and without, power applied to the actuator.

The NFB and NFX series provides 95° of rotation and is provided with a graduated position indicator showing 0° to 95°.

The actuator may be stalled anywhere in its normal rotation without the need of mechanical end switches.

The NFBUP-S and NFXUP-S versions are provided with two built-in auxiliary switches. These SPDT switches provide safety interfacing or signaling, for example, for fan start-up. The switching function at the fail-safe position is fixed at +10°, the other switch function is adjustable between +10° to +90°. The NFBUP, NFBUP-S, NFXUP and NFXUP-S actuator is shipped at +5° (5° from full fail-safe) to provide automatic compression against damper gaskets for tight shut-off.

Technical Data		NFBUP, NFBUP-S, NFXUP, NFXUP-S
Power supply		24...240 VAC -20% / +10%, 50/60 Hz 24...125 VDC ±10%

Accessories

AV 8-25	Shaft extension
IND-AFB	Damper position indicator
K7-2	Universal clamp for up to 1.05" dia jackshafts
KH-AFB	Crank arm
TF-CC US	Conduit fitting
Tool-06	8mm and 10 mm wrench
ZG-100	Universal mounting bracket
ZG-101	Universal mounting bracket
ZG-118	Mounting bracket for Barber Colman® MA 3../4.., Honeywell® Mod III or IV or Johnson® Series 100 replacement or new crank arm type installations
ZG-AFB	Crank arm adaptor kit
ZG-AFB118	Crank arm adaptor kit
ZS-100	Weather shield (metal)
ZS-150	Weather shield (polycarbonate)
ZS-260	Explosion-proof housing
ZS-300	NEMA 4X housing

Note: When using NFBUP, NFBUP-S, NFXUP, NFXUP-S actuators, only use accessories listed on this page.

For actuator wiring information and diagrams, refer to Belimo Wiring Guide.

Typical Specification

On/Off spring return damper actuators shall be direct coupled type which require no crank arm and linkage and be capable of direct mounting to a jackshaft up to a 1.05" diameter. The actuators must be designed so that they may be used for either clockwise or counterclockwise fail-safe operation. Actuators shall be protected from overload at all angles of rotation. If required, two SPDT auxiliary switch shall be provided having the capability of one being adjustable. Actuators with auxiliary switches must be constructed to meet the requirements for Double Insulation so an electrical ground is not required to meet agency listings. Actuators shall be cULus Approved and have a 5 year warranty, and be manufactured under ISO 9001 International Quality Control Standards. Actuators shall be as manufactured by Belimo.

Wiring Diagrams

INSTALLATION NOTES

1 Provide overload protection and disconnect as required.

2 ***CAUTION** Equipment Damage!*
Actuators may be connected in parallel.
Power consumption and input impedance must be observed.

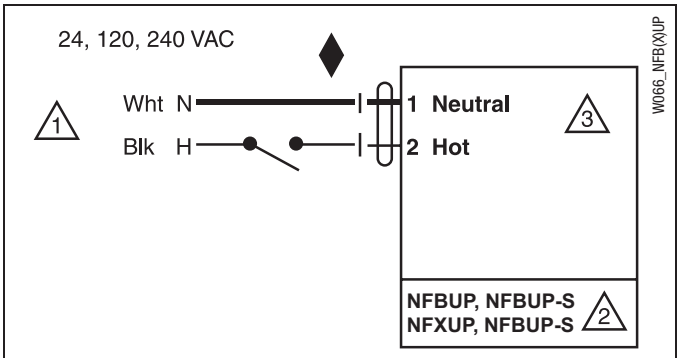
3 No ground connection is required.

4 For end position indication, interlock control, fan startup, etc., NFBUP-S and NFXUP-S incorporates two built-in auxiliary switches: 2 x SPDT, 3A (0.5A) @250 VAC, UL Approved, one switch is fixed at +10°, one is adjustable 10° to 90°.

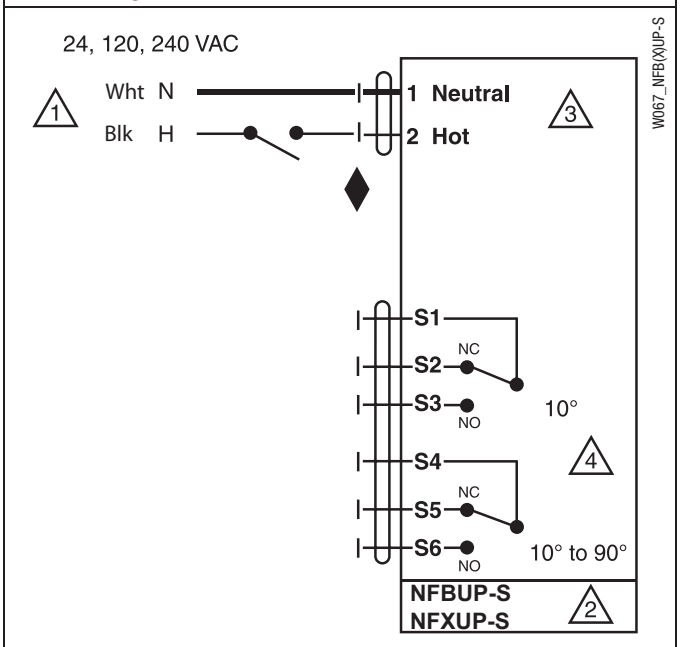
APPLICATION NOTES

Meets cULus requirements without the need of an electrical ground connection.

***WARNING** Live Electrical Components!*
During installation, testing, servicing and troubleshooting of this product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.



On/Off wiring for NFBUP, NFXUP



Auxiliary Switches for NFBUP-S, NFXUP-S

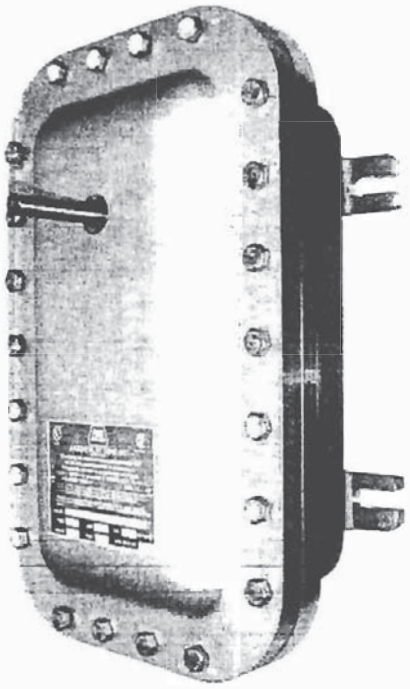
ZS-260 Explosion-proof Housing

For GM..., AM..., SM..., AF..., NF..., LF... actuators

BELIMO



Application

The ZS-260 explosion-proof housing may be used with the GM..., AM..., SM..., AF..., NF..., LF... series actuators. This housing is not designed for direct coupling. It is for use in Class I, II and III hazardous locations. and to meet the requirements for NEMA 4, 7 & 9 type enclosures.

Operation

The ZS-260 enclosure is designed so that the required actuator may be easily field mounted into the enclosure. The actuator is fastened on to the internal portion of the operating shaft and secured at the end with an anti-rotation strap. A crankarm, such as the KH8, is mounted to the external portion of the operating shaft for connection to connection to the damper linkage. ZG-109 right angle, and ZG-110 standoff mounting brackets may be used (see back)

The ZS-260 is designed so that the operating shaft can be mounted on either the front or rear side of the housing.

Accessories

KH8	Universal crankarm
KG8	Universal ball joint
KG10	Universal ball joint
ZG-109	Right angle mounting bracket
ZG-110	Stand-off mounting bracket

Technical Data	ZS-260
Material	Housing: cast, copper-free, aluminum, Cover bolts: stainless steel Operating shaft: stainless steel
Conduit holes	3/4"–14 NPT (2 supplied) see Note 1
Operating shaft diameter	1/2 inch [12.7]
Operating shaft location	Front or rear side of housing (Field selected)
Approved applications	UL & CSA, Class I, II & III; Group B, C, D, E, F & G NEMA 7, Class I, Groups B, C & D NEMA 9, Class II, Groups E, F & G NEMA 4
Weight	31.0 lb. (14.0 kg) without actuator

Note 1: Fittings that meet the requirements of the hazardous location must be used. All applications must comply with applicable local and/or national electric code.

Note: Since conditions of use of this product are outside the control of Belimo, the purchaser should determine suitability of the product for their intended use, and assumes all risk and liability in connection therewith.

Dimensions [All numbers in brackets are in millimeters.]

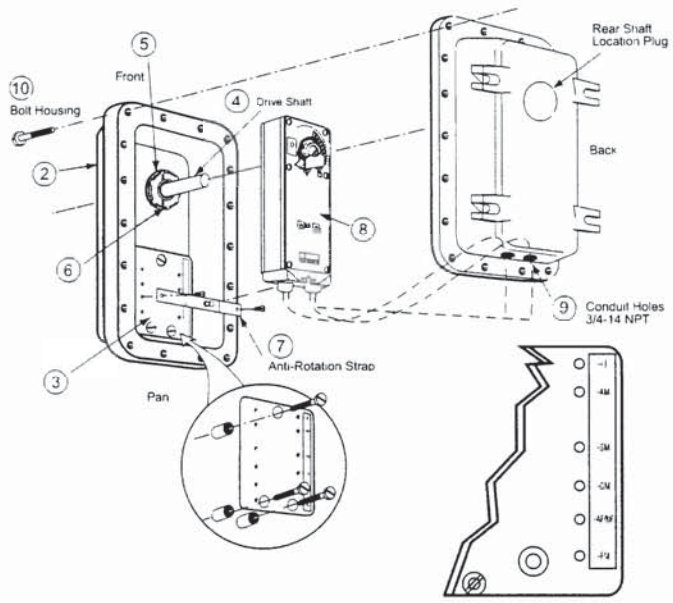
ZS-260 Explosion-proof Housing

For GM..., AM..., SM..., AF..., NF..., LF... actuators

ZS-260 Shaft Thru Front



ZS-260 Mounting Instructions

1. Determine proper operating shaft location.
2. Remove threaded plug from the hole in which the operating shaft will be mounted.
3. Install the anti-rotation strap, mounting plate, to the side of the housing where the operating shaft will be mounted.
4. From the inside surface of the housing, insert the operating shaft, short length first, into the mounting hole.
5. Hand tighten the shaft bushing into the housing until the star nut/seal is in contact with the face of the housing.
6. Using a screw driver blade, drive the star nut/seal clockwise until the bushing is locked into place.
7. Install the anti-rotation strap into the mounting plate at the designated holes for the actuator to be used.
8. Install actuator
9. Wire actuator (per electrical code).
10. Bolt housing together

Typical ZG-109 Mounting

NOTES

1) BOLTING TO BE SA-193-B7 AND SA-194-2H MATERIAL.
2) GASKETS TO BE SPIRAL WOUND 316 SS WITH FLEXIBLE CHLORITE FILLER AND CARBON STEEL INNER AND CENTRING RING (PINK STRIPE).
3) SHELLS AND HEADS MATERIAL (ITEMS #1 THROUGH #4) TO BE IMPACT TEST EXEMPT PER UCS-66 CURVE 'D' & FIG UCS-66.1. ALL OTHER COMPONENTS IMPACT TEST EXEMPT PER UCS-66(g).
4) WHEN MIG OR TIG ROOTS ARE USED, PRODUCTION IMPACT TEST COUPONS ARE REQUIRED. WM AND HAZ ARE TO BE IMPACT TESTED, PER UG-84 AND UCS-67(a)(3). TEST TEMP: -50°F TEST RESULTS: 12 ft-lbs MIN. 18 ft-lbs AVG.
5) PRESSURE RETAINING PLATE MATERIAL TO BE ULTRASONICALLY INSPECTED ON A 4" GRID, PER SA-435, FAIOR TO FORMING.
6) ALL CATEGORY 'D' WELDS TO BE ULTRASONICALLY INSPECTED.
7) NOZZLE BUTT WELDS TO BE 100% RT, LONG AND CIRC SEAMS RT PER UW-11(a) TYPE 1.
8) MAGNETIC PARTICLE INSPECT LIFTING AND TAILING LUG WELDS.
9) MIG ROOT TO BE REMOVED BY BACKGOUGING, BACKWELD WITH E7018-1.
10) ONE (1) HOUR CHART RECORDED HYDROTEST REQUIRED (CERTIFIED RECORDER, PRESSURE ONLY).
11) STANDARD FORGINGS SHALL BE IN ACCORDANCE WITH ASME B16.5, 2009 EDITION.
12) SEAL WELD BOTH SIDES OF ALL INTERNAL NON-REMOVABLE ATTACHMENTS WHERE ACCESSIBLE.
13) ALL WELDS AND INTERNAL EDGES TO BE GROUND SMOOTH WITH A 1/8" RADIUS ON CORNERS.
14) SURFACE PREPARATION: PER E&I
15) SURFACE PREPARATION SHALL NOT BE CONDUCTED ON SURFACES THAT ARE LESS THAN 3°F ABOVE DEWPOINT, OR WHEN THE RELATIVE HUMIDITY OF THE AIR IS GREATER THAN 80%.
16) PAINT: PER E&I
17) SHOP NOTE: "FS" DENOTES FAR SIDE.

TEST EQUIPMENT USED

SERIAL NO.	MAKE	MODEL NO.	CALIBRATION DATE
TE-SHOP2	CRSYTAL	XP2I	9-Aug-2013

COMMENTS: The instrument was calibrated against laboratory standards that are either traceable to the National Institute of Standards and Technology, (NIST), National Research Council, (NRC), or are derived by approved ratio techniques.

CALIBRATION TECHNICIAN: **Justin Palermo**

TARPON ENERGY SERVICES LTD.

ISO 9001: 2008 Certified

Certificate of Calibration

For Instrument :	WIKA CPG1000-BES-AIZZM3-Z
Customer Name :	5BLUE PROCESS EQUIPMENT
Description :	DIGTAL TEST GAUGE
Asset Number :	5B-DG-3K
Serial Number :	2220063
Certificate # :	9781-1

TARPON ENERGY SERVICES LTD. Certifies that...

the above described instrument met or exceeded all published (OEM) specifications at the time of calibration specified below; and has been calibrated using standards whose accuracies are traceable to the National Institute of Standards and Technology (NIST) and or National Research Council (NRC), or have been derived from accepted values or physical constants, or have been derived by ratio or self calibration techniques.

TEST POINT 3000.0 psi		2999.3	2998.5	3001.5	46.7	P

End of Test Data

- If AS FOUND/AS LEFT is not listed separately, this means that no adjustment has been made and AS FOUND = AS LEFT.
- The ERROR % TOL field contains the error as a percentage of the tolerance, and gives a quick impression of how close the instrument is to the allowed tolerance

If there are any questions about tolerances, or the certificate please call (780)466-6000.

TEST POINT 0.0 psi		0.0	-1.5	1.5	0	P
TEST POINT 750.0 psi		749.6	748.5	751.5	26.7	P
TEST POINT 1500.0 psi		1499.6	1498.5	1501.5	26.7	P
TEST POINT 2250.0 psi		2249.5	2248.5	2251.5	33.3	P
TEST POINT 3000.0 psi		2999.3	2998.5	3001.5	46.7	P

End of Test Data

- If AS FOUND/AS LEFT is not listed separately, this means that no adjustment has been made and AS FOUND = AS LEFT.
- ERROR % TOL field contains the error as a percentage of the tolerance, and gives a quick impression of how close the instrument is to the allowed tolerance
If there are any questions about tolerances, or the certificate please call (780)466-6000.

5Blue
Process Equipment Inc.

JOB NUMBER: SB1108-80

TEST DATE: 23 OCT, 2013

DESCRIPTION: PIPE SPOOLS (x2)

HYDROTEST PROCEDURE / REPORT

DESIGN PRESSURE: 285 PSI

TEST PRESSURE: 428 PSI

DESIGN TEMPERATURE: 100°F

TEST TEMPERATURE: (SEE CHART)

MINIMUM HOLD TIME: 1 HOUR

RECORDER REQUIRED: ☑ YES ☐ NO

START TIME: 1000 HRS

END TIME: 1230 HRS

PREPARED BY: MICHALKOW / BATES

ADDITIONAL INFORMATION:

Test medium used: Water

Drawing No: SB1108-02-DR-80-XXX

Gauge #1: 5B-DG-3K

Gauge #2: 5B-B1

Chart Recorder #: 5B-DG-3K

TEST RESULTS:

- Acceptable; no leaks detected.

Test Results

Test Description	True Value	Test Result	Lower limit	Upper limit	% Tol	P / F
PRESSURE TESTS						
TEST POINT 0.0 psi		0.0	-1.5	1.5	0	P
TEST POINT 750.0 psi		749.6	748.5	751.5	26.7	P
TEST POINT 1500.0 psi		1499.6	1498.5	1501.5	26.7	P
TEST POINT 2250.0 psi		2249.5	2248.5	2251.5	33.3	P
TEST POINT 3000.0 psi		2999.3	2998.5	3001.5	46.7	P

End of Test Data

If AS FOUND/AS LEFT is not listed separately, this means that no adjustment has been made and AS FOUND = AS LEFT.
ERROR % TOL field contains the error as a percentage of the tolerance, and gives a quick impression of how close the instrument is to the allowed tolerance
If there are any questions about tolerances, or the certificate please call (780)466-6000.

CALIBRATION REPORT

PREPARED FOR 5 BLUE 2303 – 8 STREET, NISKU, AB. T9E 7Z3

INSTRUMENT INFORMATION

MANUFACTURER: **CPW**	MODEL NUMBER: **4½" FACE ½ " NPT**
SERIAL NUMBER: **5B-D4**	WORK TICKET: **11470**
TYPE: **PRESSURE GAUGE**	RANGE: **0-3000 PSI**
CALIBRATION DATE: **12-Aug-2013**	CALIBRATION DUE DATE: **12-Aug-2014**

CALIBRATION DATA

TEST POINT	AS FOUND	AS LEFT
0%	0	0
20%	550	600
50%	1450	1500
80%	2350	2400
100%	2950	3000

TEST EQUIPMENT USED

SERIAL NO.	MAKE	MODEL NO.	CALIBRATION DATE
TESHOP2	CRYSTAL	XP2i	9-Aug-2013

COMMENTS: The instrument was calibrated against laboratory standards that are either traceable to the National Institute of Standards and Technology, (NIST), National Research Council, (NRC), or are derived by approved ratio techniques.

CALIBRATION TECHNICIAN: **Justin Palermo**

EC Declaration of Conformity

We

WIKA Alexander Wiegand SE & Co. KG
Alexander-Wiegand-Straße 30
63911 Klingenberg – Germany

declare under our sole responsibility that the product

Precision Digital Pressure Gauge CPG1000

to which this declaration relates is in conformity with the following standard(s) or other normative document(s)

- EN 61326-1:2006 (Annex A, Emission Group 1, Class B)
- EN 60079-0:2006
- EN 60079-15:2005

following the provisions of the directives:

94/9/EC

2004/108/EC.

Klingenberg, October 2009

Harald Hartl, Quality Assurance

5Blue
Process Equipment Inc.

JOB NUMBER: 1108-80

TEST DATE: 10 Oct 2013

DESCRIPTION: Process piping

HYDROTEST PROCEDURE / REPORT

DESIGN PRESSURE: 285 PSI

TEST PRESSURE: 428 PSI

DESIGN TEMPERATURE: 100°F

TEST TEMPERATURE: 10°C SHOP

MINIMUM HOLD TIME: 1 hour

RECORDER REQUIRED: ☑ YES ☐ NO

START TIME: 9:30 Am

END TIME:

PREPARED BY: Riddell

ADDITIONAL INFORMATION:

Test medium used: Water

Drawing No: SB1108-02-DR-80

Gauge #1: SB-B4

Gauge #2: SB-DG-3K

Chart Recorder #: SB-DG-3K

TEST RESULTS:

- Acceptable; no leaks detected.

TEST POINT 750.0 psi		749.6	748.5	751.5	26.7	P
TEST POINT 1500.0 psi		1499.6	1498.5	1501.5	26.7	P
TEST POINT 2250.0 psi		2249.5	2248.5	2251.5	33.3	P
TEST POINT 3000.0 psi		2999.3	2998.5	3001.5	46.7	P

End of Test Data

- If AS FOUND/AS LEFT is not listed separately, this means that no adjustment has been made and AS FOUND = AS LEFT.
- ERROR % TOL field contains the error as a percentage of the tolerance, and gives a quick impression of how close the instrument is to the allowed tolerance

If there are any questions about tolerances, or the certificate please call (780)466-6000.

TARPON ENERGY SERVICES LTD.

ISO 9001: 2008 Certified

Certificate of Calibration

For Instrument :	WIKA CPG1000-BES-AIZZM3-Z
Customer Name :	5BLUE PROCESS EQUIPMENT
Description :	DIGTAL TEST GAUGE
Asset Number :	5B-DG-3K
Serial Number :	2220063
Certificate # :	9781-1

TARPON ENERGY SERVICES LTD. Certifies that...

the above described instrument met or exceeded all published (OEM) specifications at the time of calibration specified below; and has been calibrated using standards whose accuracies are traceable to the National Institute of Standards and Technology (NIST) and or National Research Council (NRC), or have been derived from accepted values or physical constants, or have been derived by ratio or self calibration techniques.

CALIBRATION INFORMATION

Cal Date Time	10-May-2013 10:58:56	Temperature	23.00°C	Work Order #	9781
Next Cal Due	10-May-2014	Humidity	40 %		
Pass	Y	Tech	Chuck Hwang		
Seals OK	Y	Note	N/A		
Cal Procedure	WIKA DIGITAL TEST GAUGE 3000PSI: (1 YEAR) CAL VER			Revision	1.0

Test Results

Test Description	True Value	Test Result	Lower limit	Upper limit	% Tol	P / F
PRESSURE TESTS						
TEST POINT 0.0 psi		0.0	-1.5	1.5	0	P
TEST POINT 750.0 psi		749.6	748.5	751.5	26.7	P
TEST POINT 1500.0 psi		1499.6	1498.5	1501.5	26.7	P
TEST POINT 2250.0 psi		2249.5	2248.5	2251.5	33.3	P
TEST POINT 3000.0 psi		2999.3	2998.5	3001.5	46.7	P

End of Test Data

- If AS FOUND/AS LEFT is not listed separately, this means that no adjustment has been made and AS FOUND = AS LEFT.
- The ERROR % TOL field contains the error as a percentage of the tolerance, and gives a quick impression of how close the instrument is to the allowed tolerance

If there are any questions about tolerances, or the certificate please call (780)466-6000.

Non-Destructive Test Report

Report: 3N 3644 Page: 1 of 1
Date: 11-Dec-13 Time: 2:00 am / pm

Customer: 5Blue Process Equipment Inc. Job Number: 5B1108-80
Location: 2303-8th Street - Nisku, Alberta Reported to: Joelle Dery-Brochu
Project: Colour Contrast Magnetic Particle Examination on Spooling Purchase Order :

NDT METHOD

MAGNETIC PARTICLE

Equipment: Parker B300 S/N: 19750
Calibration Due Date: 10 - May - 14
AC: _____ x _____ Yoke: x Coil: _____
Continuous: x Dry: _____ Wet: x
Particles: Magnaflux 7HF Color Contrast: Magnaflux WCP-2
Fluorescent: no Sensitivity: man.

LIQUID PENETRANT

Penetrant: _____ D/T: _____
Developer: _____ D/T: _____
Dye: _____ Fluorescent: _____
Water Wash: _____
Temperature: _____

Light Source: Y-300 Yoke Bulb Black Light (µW): n/a White Light (fc): > 100 fc @ surface
PROCEDURE CODE: ASME Sec. V Art 7. C.P.S.: MT-2V Rev. 4 ACCEPTANCE CODE: ASME B31.3N
PROCEDURE CUSTOMER: _____ ACCEPTANCE CUSTOMER: _____
Before PWHT: x After PWHT: _____ Before Hydro: x After Hydro: _____
Material: P1 as welded: x painted: _____ machined: _____ as cleaned: x
Material Thickness: _____ Pipe Thickness: 0.200"
DESCRIPTION OF INSPECTION:
A black on white colour contrast magnetic particle examination was done on the following welds:

Control Number	Weld Number	Type	Size	Class	Welder	Weld I.D.
15A	3	SW	1½" XS	A11a	M	15A-3
15A	4	SW	1½" XS	A11a	M	15A-4
16A	2	SW	1½" XS	A11a	O	16A-2
16A	5	SW	1½" XS	A11a	O	16A-5

RESULTS:

No rejectable indications were noted. Acceptable to ASME B31.3 Normal.

CHARPY V-NOTCH IMPACT TEST RESULTS

Material Description: ASME SA-516, Grade 70; 0.625"-thick normalized plate; HT. #G8266-270020510; WPS #5B-106 AW; welded on August 8, 2013; as-welded condition; Vessel #5B1108-20.

Specimen Type: Charpy V-notch full-sized weld zone and heat-affected zone impact specimen, as per Part UG-84 of the ASME Code.

Testing Temperature: -50 F.

Results:

Weld zone: 72, 89, 86 ft-lb;

Heat-affected zone: 161, 134, 145 ft-lb.

Yours very truly,

ALFOR METALLURGICAL COMPANY LTD.

GENERAL NOTES:

1) ALL DIMENSIONS AND ELEVATIONS ARE IN IMPERIAL UNLESS OTHERWISE SPECIFIED.
2) REFER TO 5B1108-02-DR-80-000-1 FOR PIPE SUPPORT DRAWINGS.
3) SPOOL TO BE BUILT IN ACCORDANCE WITH ASME PRESSURE PIPING CODE B31.3, 2010 EDITION.
4) ALL FLANGE BOLT HOLES TO STRADDLE CENTER LINES (UNO).
5) THIS ISOMETRIC IS TO BE READ IN CONJUNCTION WITH DEVON NEC CORPORATION GS-5210 PIPING CLASS SPECIFICATIONS.
6) PIPING SPEC A13 IS TO SUPERCEDE A11 FOR ALL SMALL BORE VENTS, DRAINS AND INSTRUMENT CONNECTIONS AS PER 5BLUE RFI #4.
7) HYDRO TEST TO BE CHARTED FOR 1 HR.
8) 1/8" WELD GAP HAS BEEN TAKEN INTO ACCOUNT FOR ALL BW AND SW CONNECTIONS.
9) SHOP TO VERIFY ALL DIMENSIONS AND ELEVATIONS AND COORDINATES PRIOR TO FABRICATION.
10) JOINT NON-DESTRUCTIVE EXAMINATION:
ALL JOINT: 20% VISUAL, BW: 10% RT, SW: 5% RT(FIT-UP) + 10% MT, FILLET WELDS: 10% MT.

GENERAL NOTES:

1) ALL DIMENSIONS AND ELEVATIONS ARE IN IMPERIAL UNLESS OTHERWISE SPECIFIED.
2) REFER TO 5B1108-02-DR-80-000-1 FOR PIPE SUPPORT DRAWINGS.
3) SPOOL TO BE BUILT IN ACCORDANCE WITH ASME PRESSURE PIPING CODE B31.3, 2010 EDITION.
4) ALL FLANGE BOLT HOLES TO STRADDLE CENTER LINES (UNO).
5) THIS ISOMETRIC IS TO BE READ IN CONJUNCTION WITH DEVON NEC CORPORATION GS-5210 PIPING CLASS SPECIFICATIONS.
6) PIPING SPEC A13 IS TO SUPERCEDE A11 FOR ALL SMALL BORE VENTS, DRAINS AND INSTRUMENT CONNECTIONS AS PER 5BLUE RFI #4.
7) HYDRO TEST TO BE CHARTED FOR 1 HR.
8) 1/8" WELD GAP HAS BEEN TAKEN INTO ACCOUNT FOR ALL BW AND SW CONNECTIONS.
9) SHOP TO VERIFY ALL DIMENSIONS AND ELEVATIONS AND COORDINATES PRIOR TO FABRICATION.
10) JOINT NON-DESTRUCTIVE EXAMINATION:
ALL JOINT: 20% VISUAL, BW: 10% RT, SW: 5% RT(FIT-UP) + 10% MT, FILLET WELDS: 10% MT.

B13 Certified Welding Procedure Specifications (WPS)

2303-8th Street, Nisku Alberta, T9E-7Z3 CANADA

5BLUE PROCESS EQUIPMENT INC.

Welding Procedure Specification

in accordance with

ASME Section VIII, Section IX, B31.1 & B31.3

Welding Procedure Specification No.:	**5B-102 AW / PWHT**
Supporting PQR No. (s):	**5B-102-1, 5B-102-2, 5B-102-3, 5B-102-4**

Qualified for

Process(es):	SMAW / SMAW	**Position(s):**	All / All
Filler Metal F-No.:	F-3 / F-4	**A-No.:**	A-1 / A-1
AWS Classification:	E6010 / E7018-1	**Weld Type(s):**	Groove, Fillet, Weld Buildup
Base Metal:	P-1 Group 1 or 2	To:	P-1 Group 1 or 2
Typical Materials:	This procedure is qualified for all P-1 materials as specified in Table QW-422 of ASME Section IX for normal & sour service applications, and only P-1 Group 1 or 2 materials for applications where proven notch toughness is required.		
Diameter Range:	All	**Condition(s):**	As Welded / PWHT

As Welded: Thickness Range:	Normal & Sour Service	Impact Tested to -50°F
ASME Section IX	0.062" to 1.500"	0.125" to 1.500"
ASME Section VIII	0.062" to 1.500"	0.125" to 1.500"
ASME B31.1 / B31.3	0.062" to 0.750"	0.125" to 0.750"

(Section IX, ASME Boiler and Pressure Vessel Code)

Company Name:	5Blue Process Equipment Inc.	**By:**	Kelly R. Smith, P.Eng
WPS No.:	5B-102 AW / PWHT	**Date:**	August 17, 2010
Revision No.:	0	**Revision Date:**	----
Supporting PQR's:	5B-102-1, 5B-102-2, 5B-102-3, 5B-102-4		
Welding Process(es):	SMAW / SMAW	**Type(s):**	Manual / Manual

JOINTS QW-402

Joint Design: Butt, Tee, Lap, Corner, etc.
Backing: F-3 with or without backing
F-4 with backing only
Backing Material (Type): Similar base or weld metal or backwelding as required. No Retainers.

Joint Details
All ASME joint designs. Reference construction drawings for joint details. Where joint details are not specified, refer to typical joint detail sheet provided.

Tungsten Electrode Type & Size:	Not Applicable			
Mode of Metal Transfer for GMAW:	Not Applicable			
Electrode Wire feed speed range:	Not Applicable			
Other:	Maximum heat inputs mandatory only when proven notch toughness is required.			

TECHNIQUE QW-410	
String or Weave Bead:	String and weave. Weave size shall be controlled to prevent exceeding maximum heat inputs.
Orifice or Gas Cup Size:	Not Applicable
Initial Cleaning:	Base material must be thoroughly cleaned of all foreign material (scale, rust, oil, grease, paint, tar, etc.) at least 1" back on each side of the joint prior to welding. All surfaces to be welded shall be smooth, uniform and free from notches, slag, fins and burrs.
Interpass Cleaning:	Perform by wire brush, chipping hammer, power brushing, grinding, etc. after each weld layer.
Method of Back Gouging:	Arc air, gouge, grind, etc., if required. Grind to clean metal where thermal processes are used.
Oscillation:	Not Applicable
Contact Tube to Work Distance:	Not Applicable
Multiple or Single Pass (per side):	Single or multiple passes per side. Multiple only when proven notch toughness is required.
Multiple or Single Electrodes:	Single electrodes only
Peening:	Peening is not allowed

TYPICAL WELDING PARAMETERS

	Filler Metal		Current			
Process	AWS Classification	Diameter (in)	Type & Polarity	Amp Range	Volt Range	Travel Speed (IPM)
SMAW	E6010	3/32	DC EP	40 - 100	18 - 30	1 - 12
SMAW	E6010	1/8	DC EP	50 - 150	20 - 32	2 - 14
SMAW	E6010	5/32	DC EP	70 - 180	22 - 34	4 - 16
SMAW	E7018-1	3/32	DC EP	45 - 130	18 - 28	1 - 14
SMAW	E7018-1	1/8	DC EP	60 - 180	18 - 30	2 - 16
SMAW	E7018-1	5/32	DC EP	90 - 230	20 - 32	3 - 18
SMAW	E7018-1	3/16	DC EP	130 - 290	20 - 34	4 - 19
SMAW	E7018-1	1/4	DC EP	180 - 360	22 - 34	4 - 20
Notes:	Number of weld layers and size of filler metal may vary with thickness of base material and position of weld. 1/4" E7018-1 electrodes are limited to flat (1G) position only.					

WELDING PROCEDURE SPECIFICATION (WPS) QW-482
(Section IX, ASME Boiler and Pressure Vessel Code)

WPS # 5B-102 AW / PWHT

AS WELDED: PREHEAT & INTERPASS TEMPERATURE MINIMUM AND MAXIMUM	
Section I :	50°F minimum for all P-1 materials except as listed below :
	200°F if the joint thickness exceeds 1.00" and the specified carbon content exceeds 0.30%
Section VIII :	50°F minimum for all P-1 materials except as listed below :
	200°F if the joint thickness exceeds 1.00"
B31.1 :	50°F minimum for all P-1 materials except as listed below :
	175°F if the joint thickness exceeds 1.00" and the specified carbon content exceeds 0.30%
B31.3 :	50°F for all P-1 materials except as listed below:
	175°F if the specified minimum tensile strength of the base material exceeds 71 ksi
	175°F if the nominal wall thickness exceeds 1"
Max. Interpass Temp.:	650°F for normal service, 550°F for applications where proven notch toughness is required

Reference to relevant construction codes is mandatory prior to production welding to determine any supplementary restrictions.

WELDING PROCEDURE SPECIFICATION (WPS) QW-482
(Section IX, ASME Boiler and Pressure Vessel Code)

WPS # 5B-102 AW / PWHT

PREHEAT & INTERPASS TEMPERATURE MINIMUM AND MAXIMUM	
Section I :	50°F minimum for all P-1 materials except as listed below :
	175°F if the joint thickness exceeds 1.00" and the specified carbon content exceeds 0.30%
Section VIII :	50°F minimum for all P-1 materials except as listed below :
	175°F if the joint thickness exceeds 1.00" and the specified carbon content exceeds 0.30%
B31.1 :	50°F minimum for all P-1 materials except as listed below :
	175°F if the joint thickness exceeds 1.00" and the specified carbon content exceeds 0.30%
B31.3 :	50°F for all P-1 materials except as listed below:
	175°F if the specified minimum tensile strength of the base material exceeds 71 ksi
	175°F if the nominal wall thickness exceeds 1"
Max. Interpass Temp.:	650°F for normal service, 550°F for applications where proven notch toughness is required

POSTWELD HEAT TREATMENT	
Section I :	1100°F minimum holding temperature
	Up to 2" wt: 1 hour per inch nominal wall thickness, 15 minutes minimum holding time
	Over 2" wt: 2 hours plus 15 minutes for each additional inch over 2"
Section VIII :	1100°F minimum holding temperature
	Up to 2" wt: 1 hour per inch nominal wall thickness, 15 minutes minimum holding time
	Over 2" wt: 2 hours plus 15 minutes for each additional inch over 2"
B31.1 :	1100°F to 1200°F holding temperature range
	Up to 2" wt: 1 hour per inch nominal wall thickness, 15 minutes minimum holding time
	Over 2" wt: 2 hours plus 15 minutes for each additional inch over 2"
B31.3 :	1100°F to 1200°F holding temperature range
	1 hour per inch nominal wall thickness, 1 hour minimum holding time
Maximum PWHT Time:	11 hours 15 minutes for applications where proven notch toughness is required

PWHT HEATING & COOLING REQUIREMENTS		
Section I :	Heating:	Heat slowly to holding temperature
	Cooling:	Cool slowly in a still atmosphere to a temperature not exceeding 800°F
Section VIII * :	Heating:	Ambient to 800°F at moderate rate
		800°F to holding temperature at 400°F ÷ wt per hr; maximum 400°F per hr
	Cooling:	Holding temperature to 800°F at 500°F ÷ wt per hr; maximum 500°F per hr
		800°F to ambient by still air cooling
B31.1 :	Heating:	600°F to holding temperature at 600°F ÷ 1/2 wt per hr; maximum 600°F per hr
	Cooling:	Holding temperature to 600°F at 600°F ÷ 1/2 wt per hr; maximum 600°F per hr
B31.3 :	Heating:	Heat to holding temperature at moderate rate
	Cooling:	Cool at moderate rate
*** Note :**	Section VIII heating & cooling rates are recommended for most applications	

Reference to relevant construction codes is mandatory prior to production welding to determine any supplementary restrictions.

FEB 2 0 2014
Received by Document Control

The welding procedure, tracking number 2014-01012, originally received on February 06, 2014 was surveyed and accepted for registration as follows:

Reg. No. : WP-3146.2 **Accepted on:** February 13, 2014
Reg Type: Revision To accepted Design
Spec. No. : 5B-103 AW/PWHT REV 1

An invoice covering survey and registration fees will be forwarded from our Revenue Accounts.

Enclosed is a stamped welding procedure for your reference.

Please note the acceptance of this registration does not allow the use of this welding procedure in the construction, modification, on any boiler, pressure vessel, pressure piping system or fitting in Alberta unless the contractor/manufacturer has registered a Quality Control System for such work with ABSA.

Sincerely,

R. Roseberg

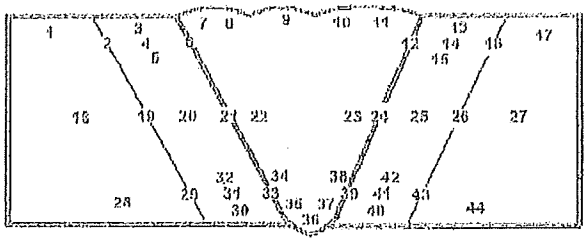
HARDNESS TEST REPORT

for Procedure Qualification Record # 5B-102-3

Client:	5Blue Process Equipment Inc.	Job Number:	1111-10001
Address:	2303 - 8th Street Nisku AB T9E 7Z1	Date:	August 17, 2010
Materials:	SA-516 Gr. 60/70		
Size:	0.340" Plate (machined)	Condition:	PWHT
Test Specification:	NACE RP-0472		

Test Method:	Hardness testing performed in accordance with ASTM E-92 (Vickers Hardness of Metallic Materials) using a Vickers tester with a 1 kg load



Vickers Hardness Values

1	160	10	194	19	154	28	151	37	157
2	156	11	204	20	174	29	153	38	164
3	165	12	175	21	170	30	162	39	159
4	169	13	190	22	180	31	142	40	156
5	175	14	187	23	170	32	164	41	163
6	189	15	184	24	140	33	162	42	164
7	208	16	152	26	163	34	153	43	164
8	180	17	148	26	150	36	156	44	159
9	192	18	150	27	154	36	159		

We certify that the statements in this record are acceptable, in accordance with the requirements of NACE RP 0472. RP 0472-2005 paragraph 5.3 states "The maximum allowable HAZ hardness shall be 248 HV the maximum weld deposit hardness should be 248 HV and the average weld deposit hardness should not exceed 210 HV"

METAL TEST REPORT

Material Description: ASME SA-516, Grade 70; 0.250"-thick plate; as-welded condition.

Specimen Type: Reduced-section tensile, as per Figure QW-462.1(a) of the ASME Code; guided face and root bend, as per Figure QW-462.3(a) of the ASME Code.

Results:	Sample 1	Sample 2
Width:	0.761 in.	0.757 in.
Thickness:	0.241 in.	0.243 in.
Area:	0.183 sq. in.	0.184 sq. in.
Ultimate Load:	14 580 lb	14 730 lb
Ultimate Tensile Strength:	79 500 psi	80 100 psi
Fracture Character:	Ductile	Ductile
Fracture Location:	Weld	Weld

Guided face bend (samples 2 and 4), guided root bend (samples 1 and 3): Pass Tests.

5BLUE PROCESS EQUIPMENT INC
2303 8 STREET
NISKU, AB

The welding procedure, tracking number 2013-07749, originally received on October 23, 2013 was surveyed and accepted for registration as follows:

Reg. No. : WP-3146.2 **Accepted on:** October 31, 2013

Reg Type: Revision To accepted Design

Spec. No. : 5B-106AW REV 1

An invoice covering survey and registration fees will be forwarded from our Revenue Accounts.

Enclosed is a stamped welding procedure for your reference.

Please note the acceptance of this registration does not allow the use of this welding procedure in the construction, modification, on any boiler, pressure vessel, pressure piping system or fitting in Alberta unless the contractor/manufacturer has registered a Quality Control System for such work with ABSA.

Sincerely,

R. Roseberg

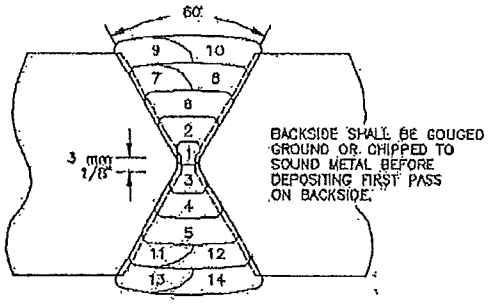

FIGURE 17

PREHEAT AND POST WELD HEAT TREATMENT

PREHEAT TEMPERATURE MINIMUM (PWHT)	
Section 1/VIII:	50° F minimum for all P1 materials except as listed below:
	o 175° F, if the joint thickness exceeds 1.000" and the specified carbon content exceeds 0.30%
	o 200° F, if the normal thickness is 1.250 or thicker
B31.1:	50° F minimum for all P1 materials except as listed below:
	o 200°F, if the nominal thickness of either of the base metals exceeds 1.000"
B31.3:	50° F minimum for all P1 materials except as listed below:
	o 175° F, if the specified minimum tensile strength of the base material exceeds 71 ksi

Reference to relevant construction codes is mandatory prior to production welding to determine any supplementary restrictions.

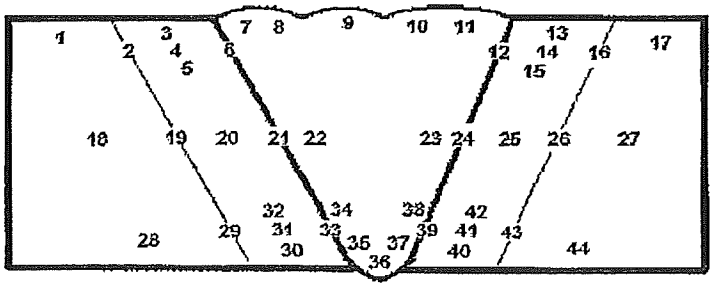
VICKERS HARDNESS TEST REPORT

for Procedure Qualification Record # 5B-106 AW-1

Client:	5Blue Process Equipment Inc.	**Job Number:**	1111-11006
Address:	2303-8th Street, Nisku AB, T9E 7Z1	**Date:**	March 10, 2011
Materials:	SA-516 Gr. 60/70		
Size:	1.000" thick plate	**Condition:**	As Welded
Test Pattern:	NACE RP-0472 Test Pattern		

Test Method:	Hardness testing performed in accordance with ASTM E-92 (Vickers Hardness of Metallic Materials) using a Vickers tester with a 1 kg load



Vickers Hardness Values

1	160	10	213	19	153	28	163	37	159
2	168	11	226	20	173	29	167	38	158
3	171	12	209	21	177	30	175	39	170
4	177	13	181	22	189	31	165	40	168
5	185	14	184	23	203	32	174	41	163
6	207	15	204	24	192	33	153	42	171
7	197	16	184	25	176	34	180	43	150
8	201	17	148	26	182	35	166	44	159
9	203	18	151	27	159	36	167		

We certify that the statements in this record are acceptable, in accordance with the requirements of NACE RP 0472. RP 0472-2005 paragraph 5.3 states "The maximum allowable HAZ hardness shall be 248 HV the maximum weld deposit hardness should be 248 HV and the average weld deposit hardness should not exceed 210 HV"

VICKERS HARDNESS TEST REPORT

for Procedure Qualification Record # 5B-106 AW-3

Client:	5Blue Process Equipment Inc.	**Job Number:**	1111-11006
Address:	2303-8th Street, Nisku AB, T9E 7Z1	**Date:**	March 10, 2011
Materials:	SA-516 Gr. 60/70		
Size:	1.000" thick plate	**Condition:**	As Welded
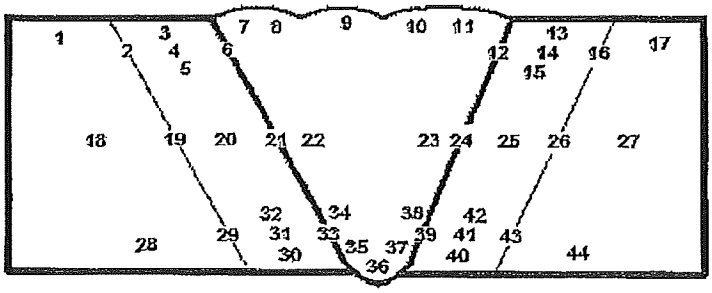
Test Pattern:	NACE RP-0472 Test Pattern		

Test Method:	Hardness testing performed in accordance with ASTM E-92 (Vickers Hardness of Metallic Materials) using a Vickers tester with a 1 kg load



Vickers Hardness Values

1	164	10	217	19	167	28	157	37	162
2	181	11	200	20	223	29	169	38	156
3	235	12	199	21	196	30	175	39	170
4	231	13	201	22	193	31	179	40	172
5	213	14	214	23	194	32	176	41	173
6	223	15	199	24	217	33	161	42	175
7	225	16	174	25	166	34	173	43	171
8	188	17	165	26	171	35	168	44	157
9	193	18	159	27	150	36	161		

We certify that the statements in this record are acceptable, in accordance with the requirements of NACE RP 0472. RP 0472-2005 paragraph 5.3 states "The maximum allowable HAZ hardness shall be 248 HV the maximum weld deposit hardness should be 248 HV and the average weld deposit hardness should not exceed 210 HV"

RECEIVED JUN 14 2012 STAINLESS SALES CORP.

Please Note—This consignment was turned over to [illegible] class condition, being correctly loaded, at which time [illegible]bility for loss or damage in shipment ceased. For your [illegible]ease examine shipment as it arrives. If any shortage or [illegible]covered, have a full description made by transportation [illegible]bill before signing.

WARNING
Material Safety Data Sheets for this product have been supplied to your Purchasing Department. For an additional copy phone 724-226-5980. CAUTION: Processing that makes fumes, dust, or solutions may cause lung disease. See Material Safety Data Sheets for further information.

Les fiches d'information—sécurité de ce produit ont été fournies à votre département chargé des achats. Pour obtenir des exemplaires supplémentaires veuillez téléphoner au numéro suivant 724-226-5980. Attention: les traitements entrainant la production de vapeurs, poussieres, ou solutions peuvent, être cause de maladies pulmonaires. Pour plus de renseignements se référer aux

The above is a true copy of data on file. The material and test results conform to the sales contract and specification(s) as set forth in Allegheny Ludlum's Order Acknowledgement.

5BLUE PROCESS EQUI 00011689	PO: P6903-5B1108-20	Sales Order: C12826	Line: 3
2303 - 8th STREET	Item Code: LWN060150120A004A1	Qty: 1	
T9E 7Z3 NISKU, AB	Item Desc: LWN,SA350LF2,150#,6"x12",RF		
CA	Mill Heat: K9154		
Spec: ASME SA350-LF2-CL1: 2010 Edition; 2011 Addenda			

MATERIAL MEETS NACE MR0175 & MR0103 LATEST EDITIONS. CE=C+(Mn/6)+({Cr+Mo+V}/5)+({Ni+Cu}/15),
Elongation in 2" round specimen. YIELD STRENGTH MEASURED AT 0.2% OFFSET.
FVC STANDARD MANUFACTURING PRACTICES:
1) FLANGE DIMENSIONS & BOLTING COMPLY - ASME B16.5.
2) SELF-REINFORCING NOZZLES COMPLY WITH SPECIFICATION OF SECTION VIII DIV. 1 OR DIV. 2 PER CUSTOMER DESIGN/FVC DESIGN.
3) MATERIAL SPECIFICATION COMPLIES WITH ASME SECT. II PART A.
4) ALL FVC MATERIAL MANUFACTURED PER FINE GRAIN PRACTICE.
5) ALL FVC MATERIAL CERTIFIED PER EN 10204 Type 3.1 UNLESS OTHERWISE SPECIFIED.
6) CERTIFICATE OF INSURANCE AVAILABLE UPON REQUEST.
7) PRODUCT FREE OF MERCURY CONTAMINATION.

5 Blue Process Equipment Inc. JUN 13 2013 Quality Department

EPCRA Supplier Notification: This product may contain one or more toxic chemicals subject to the reporting requirements of Section 313 of the Emergency Planning and Community Right-to-Know Act (Title III of the Superfund Amendments and Reauthorization Act of 1986) and 40 C.F.R. Part 372. Potentially reportable chemicals are indicated with a checkmark in the "EPCRA" column and a Chemical Abstract Services (CAS) registry number is provided for each such chemical in addition to the percent by weight of the chemical present in this product. It is your responsibility alone to determine whether your facility is required to submit a Toxic Release Inventory Report under EPCRA Section 313.

Certification No.: 1070410
Certification Date: 6/11/2013
Issued By: Bryun Jantzen

Bryun Jantzen

This report is issued in compliance with the requirements of EN10204 3.1 / ISO 10474 3.1.b

Forming Procedure:
1. Hot Formed @ 1650F/899C and Air Cooled

Brinell Equipment: Newage Calibrated Pin
Brinell Hardness Tester

Supplementary Requirements

Normalized Material Identification Marking:
'MT' indicates normalized by the mill per ASME Code Section II, Part A, SA 20, Paragraph 13.1.1.
'GMT' indicates normalized by Edmonton Exchanger per ASME Code Section II, Part A, SA 20, Paragraph 13.1.2.
'GT' indicates normalized by Edmonton Exchanger per ASME Code Section VIII Division 1, UG-85 or ASME Code Section I, PG-77.4.

The item(s) listed above comply with the requirements of ASME Code Section I, PG-29, PG-81 and ASME Code Section VIII, Division 1, UCS-79(d), UG-79 & UG-81. All welders and procedures are qualified to ASME Code Section IX. Material being supplied conforms to the latest ASME Code Section II, Part A, 2010 Edition, Addenda July 1, 2011.

Brinell Equipment: Newage Calibrated Pin
Brinell Hardness Tester

Supplementary Requirements

STRONG BACKS USED FOR SUPPORT. TACK WELD PROCEDURE WP2 APPLIES.

Normalized Material Identification Marking:
'MT' indicates normalized by the mill per ASME Code Section II, Part A, SA 20, Paragraph 13.1.1.
'GMT' indicates normalized by Edmonton Exchanger per ASME Code Section II, Part A, SA 20, Paragraph 13.1.2.
'GT' indicates normalized by Edmonton Exchanger per ASME Code Section VIII Division 1, UG-85 or ASME Code Section I, PG-77.4.

The item(s) listed above comply with the requirements of ASME Code Section I, PG-80 and ASME Code Section VIII, Division 1, UCS-79(d), UG-79 & UG-80. All welders and procedures are qualified to ASME Code Section IX. For tacking carbon steel items, roundbar used is 1018 Cold Rolled. Material being supplied conforms to the latest ASME Code Section II, Part A, 2010 Edition, Addenda July 1, 2011.

MATERIAL MEETS NACE MR0175 & MR0103 LATEST EDITIONS. CE=C+(Mn/6)+({Cr+Mo+V}/5)+({Ni+Cu}/15), Elongation in 2" round specimen. YIELD STRENGTH MEASURED AT 0.2% OFFSET.
FVC STANDARD MANUFACTURING PRACTICES:
1) FLANGE DIMENSIONS & BOLTING COMPLY - ASME B16.5.
2) SELF-REINFORCING NOZZLES COMPLY WITH SPECIFICATION OF SECTION VIII DIV. 1 OR DIV. 2 PER CUSTOMER DESIGN/FVC DESIGN.
3) MATERIAL SPECIFICATION COMPLIES WITH ASME SECT. II PART A.
4) ALL FVC MATERIAL MANUFACTURED PER FINE GRAIN PRACTICE.
5) ALL FVC MATERIAL CERTIFIED PER EN 10204 Type 3.1 UNLESS OTHERWISE SPECIFIED.
6) CERTIFICATE OF INSURANCE AVAILABLE UPON REQUEST.
7) PRODUCT FREE OF MERCURY CONTAMINATION.

EPCRA Supplier Notification: This product may contain one or more toxic chemicals subject to the reporting requirements of Section 313 of the Emergency Planning and Community Right-to-Know Act (Title III of the Superfund Amendments and Reauthorization Act of 1986) and 40 C.F.R. Part 372. Potentially reportable chemicals are indicated with a checkmark in the "EPCRA" column and a Chemical Abstract Services (CAS) registry number is provided for each such chemical in addition to the percent by weight of the chemical present in this product. It is your responsibility alone to determine whether your facility is required to submit a Toxic Release Inventory Report under EPCRA Section 313.

MTR #: 242,726

PO #: CI-12-628

Sales Order #: C001216832 Date: 11/26/2012

This product has not come in direct contact with mercury or any of its compounds, nor with any mercury-containing device employing a single boundary of containment. No welding performed.
We certify that the contents of this report are correct and accurate, and that all test results and operations performed by WFI or its subcontractors are in compliance with the material specification and requirements of the referenced code or standard, and that the material conforms to the dimensional requirements of the order. This document is in accordance with EN10204 3.1.

Sales Order #: C001200012 Date: 01/04/2012

This product has not come in direct contact with mercury or any of its compounds, nor with any mercury-containing device employing a single boundary of containment. No welding performed.

We certify that the contents of this report are correct and accurate, and that all test results and operations performed by WFI or its subcontractors are in compliance with the material specification and requirements of the referenced code or standard, and that the material conforms to the dimensional requirements of the order. This document is in accordance with EN10204 3.1.

DATE: MAY 1 2 2014 PURCHASE ORDER# 5B1109-90

CUSTOMER/OWNER DuSan

DESCRIPTION OF MATERIAL:	PLATE	TUBE /PIPE	BAR	FITTINGS	

		YES	NO
1	MATERIALS CORRECT TO PURCHASE ORDER:	✓	
2	MTR SUPPLIED WITH MATERIALS	✓	
3	MTR CHECKED AGAINST PACKING SLIP	✓	
4	MTR CORRECT FOR THIS MATERIAL	✓	
5	IS MATERIALS IN GOOD CONDITION (NO DAMAGE): ASME SECTION II EDITION 2013	✓	
6	IS MATERIAL THE SAME SIZE AND SCHEDULE AS REQUIRED ON THE PURCHASE ORDER:	✓	
7	IS MATERIAL THE CORRECT GRADE AS REQUIRED ON THE PURCHASE ORDER	✓	
8	IS THE MATERIAL LEGIBLY MARKED FROM THE SUPPLIER? THIS MAY BE STAMPED or STENCILED (record Grade. Type, Heat # And any other relevant information)	✓	

5 Blue Process Equipment Inc. MAY 1 2 2014 Quality Department

NOTE: If any of these inspection steps cannot be completed the inspector shall notify the QS ASAP. The QS shall make out a NCR detailing the discrepancies and the material in question shall be quarantined until a satisfactory solution to the problem can be resolved. This may include rework or sending the material back to the supplier

Inspector : G. CAMERON Signature: Date MAY 1 2 2014

This product has not come in direct contact with mercury or any of its compounds, nor with any mercury-containing device employing a single boundary of containment. No welding performed.
We certify that the contents of this report are correct and accurate, and that all test results and operations performed by WFI or its subcontractors are in compliance with the material specification and requirements of the referenced code or standard, and that the material conforms to the dimensional requirements of the order. This document is in accordance with EN10204 3.1.

STEEL, STAINLESS STEEL, ALUMINUM, BRASS, COPPER, NICKEL AND SPECIALTY STEEL

The above listed products, in a natural state, do not pose inhalation, ingestion or contact hazards.

Prolonged overexposure to dust or fumes during welding, burning, grinding or machining may result in respiratory irritation, skin irritation or disease. USE ADEQUATE VENTILATION AND APPROPRIATE PERSONAL PROTECTIVE EQUIPMENT.

For Brass and Copper Alloys, contact with acids may liberate flammable and explosive hydrogen gas. If heated, copper oxide, zinc oxide, nickel oxide, tin oxide, cadmium oxide and/or lead fumes may be evolved. Aluminum products may slip during handling or transportation.

ALL PRODUCTS MUST BE SECURED FOR HANDLING AND TRANSPORTATION. Cutting steel containment strapping may result in the strapping rebounding and injuring those nearby. EXERCISE CAUTION.

For overexposure to metal fumes, remove to fresh air. For skin contact, wash thoroughly with soap and water. Obtain medical attention if symptoms persist.

SEE MATERIAL SAFETY DATA SHEETS FOR MORE DETAILED INFORMATION.

THE LOAD MUST BE TARPED AND KEPT DRY

DATE _____ SIGNED _____

PURCHASER'S ORDER IS FILLED IN ACCORDANCE WITH THE ABOVE TERMS AND CONDITIONS AND THOSE ON THE REVERSE HEREOF, ALL OF WHICH TERMS AND CONDITIONS SUPERSEDE THE TERMS AND CONDITIONS (IF ANY) OF PURCHASER'S ORDER. BY ACCEPTING DELIVERY OF ALL OR PART OF THE ABOVE-DESCRIBED GOODS (HEREINAFTER CALLED THE "GOODS") OR BY PAYING FOR SAME IN WHOLE OR IN PART PURCHASER AGREES TO ALL THE TERMS AND CONDITIONS SET FORTH ABOVE AND ON THE REVERSE HEREOF.

5 Blue Process Equipment Inc. SEP 30 2013 Quality Department

I hereby certify that the material described herein has been manufactured in accordance with the specifications and standards listed above and that it satisfies those requirements.
1.) Weld repair was not performed on this material.
2.) Melted and Manufactured in the United States.
3.) Mercury, Radium, or Alpha source materials in any form have not been used in the production of this material.

BRANCH LOCATION:	01 Edmonton	LOCATION/LSD:	5 Blue		

TEST EQUIPMENT DATA

MANUFACTURER:	Fluke	MODEL NO.:	1587
TYPE:	Insulation Multimeter	TEST RANGE:	N/A
CALIBRATION CERTIFICATE NO.:		CALIBRATION DATE:	

STATUS: IP - INSPECTION PASS N/A - NOT APPLICABLE B/O - BY OTHERS		STATUS	INITIAL	DATE
VERIFY THE CABLE TYPE AND SIZE TO THE CURRENT CABLE SCHEDULE.		IP	C.S.	03-Mar-2014
CHECK FOR ANY MECHANICAL DAMAGE OR DETERIORATION TO THE CABLE INSULATION.		IP	C.S.	03-Mar-2014
ENSURE CABLE IS PROPERLY TRAINED AND SECURED TO RACEWAY AS PER SPECIFICATIONS.		IP	C.S.	03-Mar-2014
CHECK CABLE BENDING RADIUS AND MECHANICAL PROTECTION, AS PER CODE.		IP	C.S.	03-Mar-2014
VERIFY THAT THE CABLE CONNECTOR / BUSHINGS ARE OF THE PROPER TYPE AND SIZE AS SPECIFIED. CONFIRM AREA CLASSIFICATION AND SEALS (IF REQUIRED).		IP	C.S.	03-Mar-2014
CONFIRM ROUTING, SEGREGATION, AND SOURCE / DESTINATION TO DRAWINGS, DETAILS, AND SPECIFICATIONS.		IP	C.S.	03-Mar-2014
CHECK FOR PROPER SUPPORT FOR CABLES IN SWITCHGEAR, MOTOR CONTROL CENTRES, POWER PANELS, CABLE TRAYS, AND CONDUIT, AS PER DETAILS.		IP	C.S.	03-Mar-2014
ENSURE THE CABLE GROUND AND SHEATH BONDING IS SECURELY FASTENED.		IP	C.S.	03-Mar-2014
CHECK FOR TIGHTNESS OF CONNECTIONS AND TERMINATIONS.		IP	C.S.	03-Mar-2014
CONFIRM SOURCE / DESTINATION ARE CONSISTENT WITH THE DRAWINGS, AND THAT PROPER CABLE TAGS ARE IN PLACE.		IP	C.S.	03-Mar-2014
CABLE POINT TO POINT CHECK COMPLETED. CONFIRM THAT SOURCE, DESTINATION, AND CORE NUMBERS MATCH, AND ARE CONSISTENT WITH THE DRAWINGS.	Attach Cable Schedule / IO Drawings with *Yellow* *Hi-lites*	IP	C.S.	03-Mar-2014
POWER CABLE MEGGER CHECKS COMPLETED, CONFIRM SOURCE AND DESTINATION ARE CONSISTENT WITH THE DRAWINGS, FORMS TEC-Q-F-0116 AND TEC-Q-F-0119.	Attach Cable Schedule / Single Lines with *Green* *Hi-lites*	IP	C.S.	03-Mar-2014
CABLES VERIFIED AND ROLLED BACK, POINT TO POINT CHECKS TO BE FIELD COMPLETED.	Attach Cable Schedule with *Orange* *Hi-lites*	NA	C.S.	03-Mar-2014
POWER CABLES VERIFIED AND ROLLED BACK, MEGGER CHECKS TO BE FIELD COMPLETED.	Attach Cable Schedule with *Pink* *Hi-lites*	B/O	C.S.	03-Mar-2014

End of Test Data

- If AS FOUND/AS LEFT is not listed separately, this means that no adjustment has been made and AS FOUND = AS LEFT.
- The ERROR % TOL field contains the error as a percentage of the tolerance, and gives a quick impression of how close the instrument is to the allowed tolerance

If there are any questions about tolerances, or the certificate please call (780)466-6000.

B18 Code Registration Certificate

2303-8th Street, Nisku Alberta, T9E-7Z3 CANADA

CERTIFICATE OF AUTHORIZATION

U

The named company is authorized by the American Society of Mechanical Engineers (ASME) for the scope of activity shown below in accordance with the applicable rules of the ASME Boiler and Pressure Vessel Code. The use of the certification mark and the authority granted by this Certificate of Authorization are subject to the provisions of the agreement set forth in the application. Any construction stamped with this certification mark shall have been built strictly in accordance with the provisions of the ASME Boiler and Pressure Vessel Code.

COMPANY:

5Blue Process Equipment Inc.
2303 - 8th Street
Nisku, Alberta, T9E 7Z3
Canada

SCOPE:

Manufacture of pressure vessels at the above location only

AUTHORIZED: **December 6, 2013**

EXPIRES: **February 4, 2017**

CERTIFICATE NUMBER: **40,338**

Vice President, Conformity Assessment

Director, Conformity Assessment

The American Society of Mechanical Engineers

B19 Hydrostatic Testing Procedure

2303-8th Street, Nisku Alberta, T9E-7Z3 CANADA

19.0 PRESSURE TESTS

19.0 Purpose

To provide the system to ensure that all pressure tests, are completed in accordance with the Code and job specifications.

19.1 General

Pneumatic testing must be completed in accordance with an approved procedure. Sensitive leak tests must be in accordance with ASME Section V Article 10.

19.2 Quality Inspector Duties

The Quality Inspector is responsible for all pressure tests. His duties include the following:

a) Witnessing all pressure tests and verifying that they are performed in accordance with a hydrotest procedure.

b) Recording completion of the test on the Pressure Vessel Travel Sheet and Hydro Test Report **(Exhibit 23.31)** when it has been satisfactorily completed. All pressure vessels shall have the hydro test witnessed and accepted by the Authorized Inspector.

c) For the recording of multiple gauge readings, for example 1 reading every 15 minutes for 2 hour pressure hold, Supplementary Hydrostatic Test Report **(Exhibit 23.32)** is to be used.

19.3 Hydrostatic Testing

a) All hydrostatic tests performed will be undertaken with maximum regard to personnel safety. All unauthorized personnel will stay clear of the area where the test is being performed.

b) The metal temperature should be at least 30 degrees F above MDMT but need not exceed 120 degrees F for ASME Code, Section VIII, Division 1, pressure vessels. The water and metal temperature shall not be less than the MDMT of the pressure vessel. Air will be vented as the vessel is filled.

c) The pressure will be increased gradually to the hydrostatic test pressure stated on the approved drawings. The test will be held for minimum time allowed by Code, special Customer Specification or long enough for the Quality Inspector and Authorized Inspector to complete the visual inspection, whichever is longer.

d) If required by the Authorized Inspector, the visual inspection will be made at the MAWP of the vessel.

e) Upon completion of the test, the pressure will be gradually released and the vessel will be vented before removing any fittings.

f) Hydrostatic testing of vessels will require a minimum of two calibrated pressure gauges with one mounted directly on the vessel. These pressure gauges should be graduated to approximately twice the test pressure, but in no case less than 1.5 times or more than 4 times the test pressure.

g) Hydrostatic testing of piping components will require a minimum of two calibrated pressure gauges and be held for a minimum of 10 minutes or as dictated by client specifications. Recording device(s) may be employed if required by client specification or by request. Gauges employed shall be of suitable capacities.

h) Combination hydrostatic testing involving vessel(s) and piping components will observe para f) above for the selection of gauges.

19.4 Pneumatic Testing

If a pneumatic test for piping above 1677kJ is required, a pneumatic test procedure will be submitted to the ABSA Design Survey Section for acceptance prior to use. Coincident with the acceptance of a specific pneumatic test procedure, all non-destructive examinations related to pneumatic testing that are required by the Construction Code (UW-50) shall be performed.

See Section 22 Standard Pneumatic Test Procedure for conducting testing.

Filler Metal Group (F-No.): F6 / F6 — Min. Outside Pipe Diameter: 1"

Max. Deposited Weld Metal: 0.1375" / 0.438" — Position(s) Qualified: SP-1G

Backing: W/WO / WITH — Backing Gas: W/WO

Progression: N/A / N/A

MARCH 5, 2014 — P.Q. Expiry Date — Welding Examiner Signature — WE00080 — Certification No.

PERFORMANCE QUALIFICATION

Process(es): GMAW PULSED — Material (P-No.): P8

Filler Metal Group (F-No.): F6 — Min. Outside Pipe Diameter: 2 7/8

Max. Deposited Weld Metal: 1.186" — Position(s) Qualified: SP-1G

Backing: WITH — Backing Gas: N/A

Progression: N/A

JUNE 6, 2014 — P.Q. Expiry Date — Welding Examiner Signature — WE00080 — Certification No.

PERFORMANCE QUALIFICATION

Process(es): GMAW / SMAW — Material (P-No.): P8

Filler Metal Group (F-No.): F6 / F5 — Min. Outside Pipe Diameter: 1"

Max. Deposited Weld Metal: .137" / .186" — Position(s) Qualified: FLAT

Backing: W/H.D. / WITH — Backing Gas: W/N.G.

Progression: NA / NA

08-11-30 — P.Q. Expiry Date — Welding Examiner Signature — WG00091 — Certification No.

PERFORMANCE QUALIFICATION

Process(es): SMAW — Material (P-No.): P8

Filler Metal Group (F-No.): F5 — Min. Outside Pipe Diameter: 2 7/8

Max. Deposited Weld Metal: WPS LIMITS — Position(s) Qualified: FLAT

Backing: WITH — Backing Gas: N/A

Progression: N/A

JUNE 11, 2014 — P.Q. Expiry Date — Welding Examiner Signature — WE00080 — Certification No.

PERFORMANCE QUALIFICATION

Process(es): GTAW / SMAW — Material (P-No.): P4

Filler Metal Group (F-No.): F6 / F4 — Min. Outside Pipe Diameter: 1"

Max. Deposited Weld Metal: 0.25" / 0.622" — Position(s) Qualified: ALL

Backing: W/WO / WITH — Backing Gas: W/WO

Progression: UP / UP

JUNE 20, 2012 — P.Q. Expiry Date — Welding Examiner Signature — WE00080 — Certification No.

PERFORMANCE QUALIFICATION

Process(es): SMAW / FCAW — Material (P-No.): P4

Filler Metal Group (F-No.): F4 / F6 — Min. Outside Pipe Diameter: 2 7/8

Max. Deposited Weld Metal: 0.25" / WPS LIMITS — Position(s) Qualified: F, V, O

Backing: WITH / WITH — Backing Gas: N/A

Progression: UP / UP

JUNE 13, 2012 — P.Q. Expiry Date — Welding Examiner Signature — WE00080 — Certification No.

See All Previously Submitted NDE Procedures

2303-8th Street, Nisku Alberta, T9E-7Z3 CANADA

B33 Weld Repair Procedure

2303-8th Street, Nisku Alberta, T9E-7Z3 CANADA

21.0 REPAIRS AND/OR ALTERATIONS TO EXISTING PRESSURE VESSELS

21.0 Purpose

To provide the system for control of repairs and/or alterations to existing pressure vessels.

21.1 Regulations

All repairs and/or alterations shall be in accordance with the Alberta Safety Codes Act and Regulations.

21.2 Repair/Alteration Procedures

The Quality Supervisor and Engineering Manager will develop a detailed procedure for all repairs/alterations containing at least:

- Vessel description, year built, Alberta (A) Number
- C.R.N., Original Manufacturer and Year Built
- Owner and location of installation, Owner's Identification Number
- Detailed step by step description of repair/alteration methods
- Sketch/Drawings, weld details and welding procedure specification numbers
- SA material specifications and sizes of all material to be used
- Non-destructive Examination and Heat Treatment requirements
- Pressure test requirements
- Any additional requirements

The Boiler and Pressure Vessel Repair/Alteration Report (AB-40) may be used to detail the procedure when suitable.

21.3 Registration

The Quality Supervisor shall obtain acceptance of the repair/alteration procedure, from Authorized Inspector and Owner prior to start of work. When required by the Authorized Inspector, this procedure will be submitted to ABSA Design Survey for acceptance. The Quality Supervisor will ensure that copies of the latest repair/alteration procedure, drawings and instructions are provided to personnel responsible for repair/alteration.

21.4 Warranty

If the Pressure Vessel is still under warranty, then the Project Manager will contact the Owner to obtain acceptance of proposed work from the original Manufacturer.

21.5 Alterations

The following additional requirements shall apply for alterations:

a) The Engineering Manager will prepare detailed design calculations and drawings in accordance with Section 10 of this Manual.
b) The Engineering Manager will submit the alterations procedure, design calculations and drawings to ABSA Design Survey Section for acceptance prior to start of work unless specifically exempt by Authorized Inspector.

21.6 Material Control

All requirements detailed in Section 11 of this Manual shall apply except as modified below:

Material shall be ordered to SA Specification listed in the Code from Bill of Materials or Repair/Alteration Procedure supplied by the Engineering Manager.

21.7 Examination & Inspection Program

The Repair/Alteration Inspection Checklist **(Exhibit 23.33)** shall contain provision for sign off by the Quality Inspector and Authorized Inspector. This shall be provided to the Authorized Inspector prior to the start of work so he can indicate his inspection and hold points. Upon satisfactory completion of the repair/alteration, the Quality Inspector will prepare and certify the Repair/Alteration Report and will present it to the Authorized Inspector for his certification.
One copy of the Repair/Alteration Report will be provided to the Owner, one copy to the Authorized Inspector, and one copy will be placed in the Quality Control Job file. A copy of each Manufacturer's Partial Data Report shall be attached to this report. When required by Authorized Inspector, a repair / alteration name plate **(Exhibit 23.15)** will be attached to vessel adjacent to the original with the following stamping;

a) Name of Repair/Alteration Organization
b) Date of repair/alteration
c) Maximum allowable working pressure and temperature
d) Original manufacturer's Name & Original Serial Number
e) Canadian Registration Number
f) MDMT (when applicable)
g) Job Number

21.8 Welding

All requirements detailed in Section 14 of this Manual shall apply for repairs/alterations.

21.9 Non-conformities

All requirements detailed in Section 16 of this Manual shall apply for repairs/alterations.

21.10 Non-destructive Examinations

All requirements detailed in Section 15 of this Manual shall apply for repairs/alterations.

21.11 Heat Treatment

All requirements detailed in Section 17 of this Manual shall apply for repairs/alterations.

21.12 Pressure Tests

All requirements detailed in Section 19 of this Manual shall apply except as modified below:

Vessel shall be subject to a hydrostatic test of unless specifically exempt by Authorized Inspector

21.13 Record Retention

The Project Engineer will assign a separate Job Number and Quality Control Job file for each vessel repaired/altered. The Quality Control Job file will contain the following applicable documents, all identified with the job number:

a) Drawings, Repair/Alteration Procedure
b) Copies of Material Test Reports, Certificates of Compliance
c) Non-destructive Examination Reports
d) Heat Treatment Form and Charts
e) Repair/Alteration Examination and Vessel Travel Sheet
f) Repair/Alteration Report with Manufacturers Partial Data Reports attached
g) Nameplate Facsimile

Alloy grade per ASTM A743 (316L), ISSUED 2006, with Sulfur content .020 +/-.005 . This certificate meets the requirements of an Inspection Certificate Type 3.1 of EN 10204:2005. The material manufacturer, Signicast Corporation, complies with PED 97/23/EC-Annex I, 4.3, with Certificate Number 01 202 USA/Q 06 2856 on file.

Chamber design MDMT is -50 °F
Chamber rated MDMT is -55 °F @ 200 psi

Chamber MAWP hot & corroded is 200 psi @ 302 °F

Chamber MAP cold & new is 200 psi @ 60 °F

Chamber MAEP is 15 psi @ 302 °F
Vacuum rings did not govern the external pressure rating.

Notes for MDMT Rating:

Note #	Exemption	Details
1.	Straight Flange governs MDMT	
2.	Material impact test exemption temperature from Fig UCS-66 Curve D = -48 °F Fig UCS-66.1 MDMT reduction = 33.2 °F, (coincident ratio = 0.6685) Rated MDMT of -81.2°F is limited to -55°F by UCS-66(b)(2)	UCS-66 governing thickness = 0.625 in

3.	Material impact test exemption temperature from Fig UCS-66 Curve D = -48 °F Fig UCS-66.1 MDMT reduction – 31.4 °F, (coincident ratio = 0.6859) Rated MDMT of -79.4°F is limited to -55°F by UCS-66(b)(2)	UCS-66 governing thickness = 0.625 in
4.	Straight Flange governs MDMT	
5.	Material impact test exemption temperature from Fig UCS-66 Curve D = -48 °F Fig UCS-66.1 MDMT reduction = 31.4 °F, (coincident ratio = 0.6862) Rated MDMT of -79.4°F is limited to -55°F by UCS-66(b)(2)	UCS-66 governing thickness = 0.625 in
6.	Nozzle is impact tested to -50 °F with an additional 5 °F reduction per UCS-66(g).	
7.	Flange rating governs: Flange impact tested to -55°F (UCS-66(g))	UG-84 provisions apply

Design notes are available on the Settings Summary page.

t_n: Nozzle thickness

Req t_n: Nozzle thickness required per UG-45/UG-16

Nom t: Vessel wall thickness

Design t: Required vessel wall thickness due to pressure + corrosion allowance per UG-37

User t: Local vessel wall thickness (near opening)

A_a: Area available per UG-37, governing condition

A_r: Area required per UG-37, governing condition

Corr: Corrosion allowance on nozzle wall

* Head minimum thickness after forming

Hydrostatic Test

Shop test pressure determination for Chamber bounded by HEAD # 2 and HEAD # 1 based on MAWP per UG-99(b)

Shop hydrostatic test gauge pressure is 260 psi at 60 °F (the chamber MAWP = 200 psi)

The shop test is performed with the vessel in the horizontal position.

Identifier	Local test pressure psi	Test liquid static head psi	UG-99(b) stress ratio	UG-99(b) pressure factor	Stress during test psi	Allowable test stress psi	Stress excessive?

N8 (N8)	260.927	0.927	1	1.30	14,522	51,300	No
N9 (N9)	262.285	2.285	1	1.30	14,598	51,300	No

Notes:
(1) HEAD # 1 limits the UG-99(b) stress ratio.
(2) P_L stresses at nozzle openings have been estimated using the method described in PVP-Vol. 399, pages 77-82.
(3) $1.5*0.9*S_y$ used as the basis for the maximum local primary membrane stress at the nozzle intersection P_L.
(4) The zero degree angular position is assumed to be up, and the test liquid height is assumed to the top-most flange.

The field test condition has not been investigated for the Chamber bounded by HEAD # 2 and HEAD # 1.

The test temperature of 60 °F is warmer than the minimum recommended temperature of -25 °F so the brittle fracture provision of UG-99(h) has been met.

HEAD # 1

ASME Section VIII, Division 1, 2010 Edition, A11 Addenda

Component:	Ellipsoidal Head
Material Specification:	SA-516 70 (II-D p.18, ln. 19)

Straight Flange governs MDMT

Internal design pressure: P = 200 psi @ 302 °F
External design pressure: P_e = 15 psi @ 302 °F

Static liquid head:

P_s= 0.52 psi (SG=1, H_s=14.5" Operating head)
P_{th}= 2.69 psi (SG=1, H_s=74.625" Horizontal test head)

Corrosion allowance:	Inner C = 0.125"	Outer C = 0"

Design MDMT = -50°F
Rated MDMT = -55°F

No impact test performed
Material is normalized
Material is not produced to fine grain practice
PWHT is not performed
Do not Optimize MDMT / Find MAWP

Radiography:	Category A joints -	Seamless No RT
	Head to shell seam -	Full UW-11(a) Type 1
Estimated weight*:	new = 798.3 lb	corr = 616 lb
Capacity*:	new = 192.5 US gal	corr = 195.2 US gal

* includes straight flange

Inner diameter	=	66"
Minimum head thickness	=	0.5313"
Head ratio D/2h	=	2 (new)
Head ratio D/2h	=	1.9925 (corroded)
Straight flange length L_{sf}	=	2"
Nominal straight flange thickness t_{sf}	=	0.625"

Results Summary

The governing condition is internal pressure.

Minimum thickness per UG-16	=	0.0625" + 0.125" = 0.1875"
Design thickness due to internal pressure (t)	=	0.4575"
Design thickness due to external pressure (t_e)	=	0.2967"
Maximum allowable working pressure (MAWP)	=	244.49 psi
Maximum allowable pressure (MAP)	=	321.48 psi
Maximum allowable external pressure (MAEP)	=	79.33 psi

Design thickness for internal pressure, (Corroded at 302 °F) UG-32(d)(1)

t = P*D / (2*S*E - 0.2*P) + Corrosion
= 200.52*66.25 / (2*20,000*1 - 0.2*200.52) + 0.125
= 0.4575"

The head internal pressure design thickness is 0.4575".

Maximum allowable working pressure, (Corroded at 302 °F) UG-32(d)(1)

P = 2*S*E*t / (D + 0.2*t) - P_s
= 2*20,000*1*0.4063 / (66.25 +0.2*0.4063) - 0.52
= 244.49 psi

The maximum allowable working pressure (MAWP) is 244.49 psi.

Maximum allowable pressure, (New at 70 °F) UG-32(d)(1)

P = 2*S*E*t / (D + 0.2*t) - P_s
= 2*20,000*1*0.5313 / (66 +0.2*0.5313) - 0
= 321.48 psi

The maximum allowable pressure (MAP) is 321.48 psi.

Design thickness for external pressure, (Corroded at 302 °F) UG-33(d)

Equivalent outside spherical radius (R_o)
R_o = K_o*D_o
= 0.886*67.0626
= 59.4149 in

A = 0.125 / (R_o / t)
= 0.125 / (59.4149 / 0.171675)
= 0.000361

From Table CS-2:B = 5,191.3303 psi

P_a = B / (R_o / t)
= 5,191.3303 / (59.4149 / 0.1717)
= 15 psi

t = 0.1717" + Corrosion = 0.1717" + 0.125" = 0.2967"

Check the external pressure per UG-33(a)(1) UG-32(d)(1)

t = 1.67*P_e*D / (2*S*E - 0.2*1.67*P_e) + Corrosion
= 1.67*15*66.25 / (2*20,000*1 - 0.2*1.67*15) + 0.125

= 0.1665"

The head external pressure design thickness (t_e) is 0.2967".

Maximum Allowable External Pressure, (Corroded at 302 °F) UG-33(d)

Equivalent outside spherical radius (R_o)

R_o = $K_o * D_o$
= 0.886*67.0626
= 59.4149 in

A = $0.125 / (R_o / t)$
= 0.125 / (59.4149 / 0.4063)
= 0.000855

From Table CS-2:B = 11,600.23 psi

P_a = $B / (R_o / t)$
= 11,600.23 / (59.4149 / 0.4063)
= 79.3264 psi

Check the Maximum External Pressure, UG-33(a)(1) UG-32(d)(1)

P = $2*S*E*t / ((D + 0.2*t)*1.67) - P_{s2}$
= 2*20,000*1*0.4063 / ((66.25 +0.2*0.4063)*1.67) - 0
= 146.71 psi

The maximum allowable external pressure (MAEP) is 79.33 psi.

% Extreme fiber elongation - UCS-79(d)

EFE = $(75*t / R_f)*(1 - R_f / R_o)$
= $(75*0.625 / 11.5325)*(1 - 11.5325 / \infty)$
= 4.0646%

The extreme fiber elongation does not exceed 5%.

HEAD # 2

ASME Section VIII, Division 1, 2010 Edition, A11 Addenda

Component:	Ellipsoidal Head
Material Specification:	SA-516 70 (II-D p.18, ln. 19)
Straight Flange governs MDMT	

Internal design pressure: P = 200 psi @ 302 °F
External design pressure: P_e = 15 psi @ 302 °F

Static liquid head:

P_s= 6.47 psi (SG=1, H_s=179.125" Operating head)
P_{th}= 2.69 psi (SG=1, H_s=74.625" Horizontal test head)

Corrosion allowance:	Inner C = 0.125"	Outer C = 0"

Design MDMT = -50°F	No impact test performed
Rated MDMT = -55°F	Material is normalized
	Material is not produced to fine grain practice
	PWHT is not performed
	Do not Optimize MDMT / Find MAWP

Radiography:	Category A joints -	Seamless No RT
	Head to shell seam -	Full UW-11(a) Type 1
Estimated weight*:	new = 843.8 lb	corr = 650.7 lb
Capacity*:	new = 192.5 US gal	corr = 195.2 US gal

* includes straight flange

Inner diameter	=	66"
Minimum head thickness	=	0.5313"
Head ratio D/2h	=	2 (new)
Head ratio D/2h	=	1.9925 (corroded)
Straight flange length L_{sf}	=	2"
Nominal straight flange thickness t_{sf}	=	0.625"

Results Summary

The governing condition is internal pressure.

Minimum thickness per UG-16	=	0.0625" + 0.125" = 0.1875"
Design thickness due to internal pressure (t)	=	0.4674"
Design thickness due to external pressure (t_e)	=	0.2967"
Maximum allowable working pressure (MAWP)	=	238.55 psi
Maximum allowable pressure (MAP)	=	321.48 psi
Maximum allowable external pressure (MAEP)	=	79.33 psi

Design thickness for internal pressure, (Corroded at 302 °F) UG-32(d)(1)

t = P*D / (2*S*E - 0.2*P) + Corrosion
= 206.47*66.25 / (2*20,000*1 - 0.2*206.47) + 0.125
= 0.4673"

The head internal pressure design thickness is 0.4674".

Maximum allowable working pressure, (Corroded at 302 °F) UG-32(d)(1)

P = 2*S*E*t / (D + 0.2*t) - P_s
= 2*20,000*1*0.4063 / (66.25 +0.2*0.4063) - 6.47
= 238.55 psi

The maximum allowable working pressure (MAWP) is 238.55 psi.

Maximum allowable pressure, (New at 70 °F) UG-32(d)(1)

P = 2*S*E*t / (D + 0.2*t) - P_s
= 2*20,000*1*0.5313 / (66 +0.2*0.5313) - 0
= 321.48 psi

The maximum allowable pressure (MAP) is 321.48 psi.

Design thickness for external pressure, (Corroded at 302 °F) UG-33(d)

Equivalent outside spherical radius (R_o)
R_o = K_o*D_o
= 0.886*67.0626
= 59.4149 in

A = 0.125 / (R_o / t)
= 0.125 / (59.4149 / 0.171675)
= 0.000361

From Table CS-2:B = 5,191.3303 psi

P_a = B / (R_o / t)
= 5,191.3303 / (59.4149 / 0.1717)
= 15 psi

t = 0.1717" + Corrosion = 0.1717" + 0.125" = 0.2967"

Check the external pressure per UG-33(a)(1) UG-32(d)(1)

t = 1.67*P_e*D / (2*S*E - 0.2*1.67*P_e) + Corrosion
= 1.67*15*66.25 / (2*20,000*1 - 0.2*1.67*15) + 0.125

= 0.1665"

The head external pressure design thickness (t_e) is 0.2967".

Maximum Allowable External Pressure, (Corroded at 302 °F) UG-33(d)

Equivalent outside spherical radius (R_o)

$R_o = K_o * D_o$
$= 0.886 * 67.0626$
$= 59.4149$ in

$A = 0.125 / (R_o / t)$
$= 0.125 / (59.4149 / 0.4063)$
$= 0.000855$

From Table CS-2:B = 11,600.23 psi

$P_a = B / (R_o / t)$
$= 11,600.23 / (59.4149 / 0.4063)$
$= 79.3264$ psi

Check the Maximum External Pressure, UG-33(a)(1) UG-32(d)(1)

$P = 2*S*E*t / ((D + 0.2*t)*1.67) - P_{s2}$
$= 2*20,000*1*0.4063 / ((66.25 + 0.2*0.4063)*1.67) - 0$
$= 146.71$ psi

The maximum allowable external pressure (MAEP) is 79.33 psi.

% Extreme fiber elongation - UCS-79(d)

$EFE = (75*t / R_f)*(1 - R_f / R_o)$
$= (75*0.625 / 11.5325)*(1 - 11.5325 / \infty)$
$= 4.0646\%$

The extreme fiber elongation does not exceed 5%.

Seismic	operating, new	39,822	32,860.6	0	0.3799	92.73
Seismic	empty, corroded	15,131.5	10,043.3	0.0033	0.3059	60.14
Seismic	empty, new	17,032.7	11,589.3	0.0009	0.3118	62.48
Seismic	vacuum, corroded	38,126.9	31,502.2	0	0.3756	90.66

Anchor bolt load (governing)

$P = -W / N + 48 * M / (N*BC)$
$= -10,043.31 / 8 + 48 * 15,131.5 / (8*70)$
$= 41.57\ lb_f$

Required area per bolt = $P / S_b = 0.0033\ in^2$

The area provided (0.551 in^2) by the specified anchor bolt is adequate.

Foundation bearing stress (governing)

$A_c = pi*(D_o^2 - D_i^2) / 4 - N*pi*d_b^2 / 4$
$= \pi*(74^2 - 62^2) / 4 - 8*\pi*1.125^2 / 4$
$= 1,273.8176\ in^2$

$I_c = \pi*(D_o^4 - D_i^4) / 64$
$= \pi*(74^4 - 62^4) / 64$
$= 746,630.9\ in^4$

$f_c = N*A_b*Preload / A_c + W / A_c + 6*M*D_o / I_c$
$= 8*0.551*12,500 / 1,273.8176 + 32,860.56 / 1,273.8176 + 6*39,822*74 / 746,630.9$
$= 93$ psi

As $f_c <= 25,333$ psi the base plate width is satisfactory.

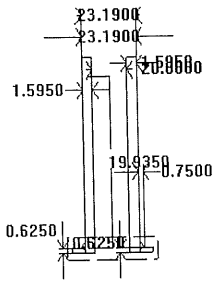
Base plate required thickness (governing)

$t_r = (3*f_c*L^2 / S_p)^{0.5}$
$= (3*93*3.625^2 / 25,333)^{0.5}$
$= 0.3799$ in

The base plate thickness is satisfactory.

M1 (M1)

ASME Section VIII Division 1, 2010 Edition, A11 Addenda



$t_{w(lower)}$ = 0.625 in

Leg_{41} = 0.75 in

Note. Per UW-16(b) minimum inside corner radius r_1 = min [1 / 4*t , 0.125 in] = 0.125 in

Applied Loads

Radial load:	P_r =	2,806 lb_f
Circumferential moment:	M_c =	152,410 lb_f-in
Circumferential shear:	V_c =	3,435 lb_f
Longitudinal moment:	M_L =	152,410 lb_f-in
Longitudinal shear:	V_L =	3,435 lb_f
Torsion moment:	M_t =	215,427 lb_f-in
Internal pressure:	P =	203.05 psi
Mean shell radius:	R_m =	33.375 in
Local shell thickness:	t =	0.5 in
Shell yield stress:	S_y =	33,600 psi

Maximum stresses due to the applied loads at the nozzle OD (includes pressure)

R_m / t = 33.375 / 0.5 = 66.75

Pressure stress intensity factor, I = 1 (derived from PVP-Vol. 399, pages 77-82)

Local circumferential pressure stress = $I*P*R_i$ / t = 13,452 psi

Local longitudinal pressure stress = $I*P*R_i$ / (2*t) = 6,726 psi

Maximum combined stress (P_L+P_b+Q) = 40,521 psi
Allowable combined stress (P_L+P_b+Q) = +-3*S = +-60,000 psi

The maximum combined stress (P_L+P_b+Q) is within allowable limits.

Maximum local primary membrane stress (P_L) = 17,227 psi
Allowable local primary membrane stress (P_L) = +-1.5*S = +-30,000 psi

The maximum local primary membrane stress (P_L) is within allowable limits.

Note: * denotes primary stress.

Longitudinal stress in the nozzle wall due to internal pressure + external loads

$\sigma_{n\ (Pm)} = P*R_i / (2*t_n) - P_r / (\pi*(R_o^2 - R_i^2)) + M*R_o / I$
$= 203.05*8.125 / (2*1.4975) - 2,806 / (\pi*(9.6225^2 - 8.125^2)) + 215,540.3*9.6225 / 3,310.6963$
$= 1,144$ psi

The average primary stress P_m (see Division 2 5.6.a.1) across the nozzle wall due to internal pressure + external loads is acceptable ($\leq S = 20,000$ psi)

Shear stress in the nozzle wall due to external loads

$\sigma_{shear} = (V_L^2 + V_c^2)^{0.5} / (\pi*R_i*t_n)$
$= (3,435^2 + 3,435^2)^{0.5} / (\pi*8.125*1.4975)$
$= 127$ psi

$\sigma_{torsion} = M_t / (2*\pi*R_i^2*t_n)$
$= 215,427 / (2*\pi*8.125^2*1.4975)$
$= 347$ psi

$\sigma_{total} = \sigma_{shear} + \sigma_{torsion}$
$= 127 + 347$
$= 474$ psi

UG-45: The total combined shear stress (474 psi) is below than the allowable ($0.7*S_n = 0.7*20,000 = 14,000$ psi)

Notes: (1) * denotes primary stress.

(2) The nozzle is assumed to be a rigid (solid) attachment.

Longitudinal stress in the nozzle wall due to internal pressure + external loads

$\sigma_{n\ (Pm)} = P*R_i / (2*t_n) - P_r / (\pi*(R_o^2 - R_i^2)) + M*R_o / I$
$= 200*8.125 / (2*1.4975) - 2,806 / (\pi*(9.6225^2 - 8.125^2)) + 215,540.3*9.6225 / 3,310.6963$
$= 1,135$ psi

The average primary stress P_m (see Division 2 5.6.a.1) across the nozzle wall due to internal pressure + external loads is acceptable ($\leq S = 20,000$ psi)

Shear stress in the nozzle wall due to external loads

$\sigma_{shear} = (V_L^2 + V_c^2)^{0.5} / (\pi*R_i*t_n)$
$= (3,435^2 + 3,435^2)^{0.5} / (\pi*8.125*1.4975)$
$= 127$ psi

$\sigma_{torsion} = M_t / (2*\pi*R_i^2*t_n)$
$= 215,427 / (2*\pi*8.125^2*1.4975)$
$= 347$ psi

$\sigma_{total} = \sigma_{shear} + \sigma_{torsion}$
$= 127 + 347$
$= 474$ psi

UG-45: The total combined shear stress (474 psi) is below than the allowable ($0.7*S_n = 0.7*20,000 = 14,000$ psi)

ASME B16.5-2009 Flange

Description:	NPS 4 Class 150 WN A350 LF2 Cl.1
Bolt Material:	SA-193 B7 Bolt <= 2 1/2 (II-D p. 334, ln. 32)
Blind included:	No
Rated MDMT:	-55°F
(UG-84 provisions apply)	
(Flange impact tested to -55°F (UCS-66(g)))	
Liquid static head:	5.5048 psi
MAWP rating:	229.4 psi @ 302°F
MAP rating:	285 psi @ 70°F
Hydrotest rating:	450 psi @ 70°F
PWHT performed:	No
Circumferential joint radiography:	Full UW-11(a) Type 1

Reinforcement Calculations for Internal Pressure

UG-37 Area Calculation Summary (in^2) For P = 205.57 psi @ 302 °F The opening is adequately reinforced							UG-45 Nozzle Wall Thickness Summary (in) The nozzle passes UG-45	
A required	A available	A_1	A_2	A_3	A_5	A welds	t_{req}	t_{min}
1.3038	1.6815	0.562	0.666	0.3003	--	0.1532	0.3324	0.4646

UG-41 Weld Failure Path Analysis Summary
The nozzle is exempt from weld strength calculations per UW-15(b)(1)

UW-16 Weld Sizing Summary			
Weld description	Required weld throat size (in)	Actual weld throat size (in)	Status
Nozzle to shell fillet (Leg_{41})	0.25	0.2625	weld size is adequate

Applied Loads

Radial load:	P_r =	486 lb_f
Circumferential moment:	M_c =	9,647 lb_f-in
Circumferential shear:	V_c =	589 lb_f
Longitudinal moment:	M_L =	9,647 lb_f-in
Longitudinal shear:	V_L =	589 lb_f
Torsion moment:	M_t =	13,630 lb_f-in
Internal pressure:	P =	205.567 psi
Mean shell radius:	R_m =	33.375 in
Local shell thickness:	t =	0.5 in
Shell yield stress:	S_y =	33,600 psi

Maximum stresses due to the applied loads at the nozzle OD (includes pressure)

R_m / t = 33.375 / 0.5 = 66.75

Pressure stress intensity factor, I = 1.17436 (derived from PVP-Vol. 399, pages 77-82)

Local circumferential pressure stress = I*P*R_i / t = 15,994 psi

Local longitudinal pressure stress = I*P*R_i / (2*t) = 7,997 psi

Maximum combined stress (P_L+P_b+Q) = 26,495 psi
Allowable combined stress (P_L+P_b+Q) = +-3*S = +-60,000 psi

The maximum combined stress (P_L+P_b+Q) is within allowable limits.

Maximum local primary membrane stress (P_L) = 17,294 psi
Allowable local primary membrane stress (P_L) = +-1.5*S = +-30,000 psi

The maximum local primary membrane stress (P_L) is within allowable limits.

Stresses at the nozzle OD per WRC Bulletin 107

Note: * denotes primary stress.

Longitudinal stress in the nozzle wall due to internal pressure + external loads

$\sigma_{n\,(Pm)} = P*R_i / (2*t_n) - P_r / (\pi*(R_o^2 - R_i^2)) + M*R_o / I$
$= 205.57*1.844 / (2*0.3396) - 486 / (\pi*(2.25^2 - 1.844^2)) + 13{,}642.9*2.25 / 11.0479$
$= 3{,}243$ psi

The average primary stress P_m (see Division 2 5.6.a.1) across the nozzle wall due to internal pressure + external loads is acceptable ($\leq S = 17{,}100$ psi)

Shear stress in the nozzle wall due to external loads

$\sigma_{shear} = (V_L^2 + V_c^2)^{0.5} / (\pi*R_i*t_n)$
$= (589^2 + 589^2)^{0.5} / (\pi*1.844*0.406)$
$= 354$ psi

$\sigma_{torsion} = M_t / (2*\pi*R_i^2*t_n)$
$= 13{,}630 / (2*\pi*1.844^2*0.406)$
$= 1{,}571$ psi

$\sigma_{total} = \sigma_{shear} + \sigma_{torsion}$
$= 354 + 1{,}571$
$= 1{,}925$ psi

UG-45: The total combined shear stress (1,925 psi) is below than the allowable ($0.7*S_n = 0.7*17{,}100 = 11{,}970$ psi)

Reinforcement Calculations for External Pressure

UG-37 Area Calculation Summary (in^2) For Pe = 15 psi @ 302 °F The opening is adequately reinforced							UG-45 Nozzle Wall Thickness Summary (in) The nozzle passes UG-45

Note: * denotes primary stress.

Longitudinal stress in the nozzle wall due to internal pressure + external loads

$\sigma_{n\,(Pm)} = P*R_i / (2*t_n) - P_r / (\pi*(R_o^2 - R_i^2)) + M*R_o / I$
$= 202.08*3.125 / (2*0.75) - 850 / (\pi*(3.875^2 - 3.125^2)) + 36{,}048.3*3.875 / 102.1815$
$= 1{,}737$ psi

The average primary stress P_m (see Division 2 5.6.a.1) across the nozzle wall due to internal pressure + external loads is acceptable ($\leq S = 20{,}000$ psi)

Shear stress in the nozzle wall due to external loads

$\sigma_{shear} = (V_L^2 + V_c^2)^{0.5} / (\pi*R_i*t_n)$
$= (1{,}041^2 + 1{,}041^2)^{0.5} / (\pi*3.125*0.75)$
$= 200$ psi

$\sigma_{torsion} = M_t / (2*\pi*R_i^2*t_n)$
$= 36{,}023 / (2*\pi*3.125^2*0.75)$
$= 783$ psi

$\sigma_{total} = \sigma_{shear} + \sigma_{torsion}$
$= 200 + 783$
$= 983$ psi

UG-45: The total combined shear stress (983 psi) is below than the allowable ($0.7*S_n = 0.7*20{,}000 = 14{,}000$ psi)

Liquid static head included:	5.577 psi
Longitudinal joint efficiency:	1

ASME B16.5-2009 Flange

Description:	NPS 4 Class 150 LWN A350 LF2 Cl.1
Bolt Material:	SA-193 B7 Bolt <= 2 1/2 (II-D p. 334, ln. 32)
Blind included:	No
Rated MDMT:	-55°F

(Flange impact tested to -50°F
UCS-66(i) reduction of 27.9 °F applied (ratio = 0.7211).)
(Flange rated MDMT = -77.9 °F
Bolts rated MDMT per Fig UCS-66 note (c) = -55 °F)

Liquid static head:	5.5048 psi
MAWP rating:	229.4 psi @ 302°F
MAP rating:	285 psi @ 70°F
Hydrotest rating:	450 psi @ 70°F
PWHT performed:	No

Reinforcement Calculations for Internal Pressure

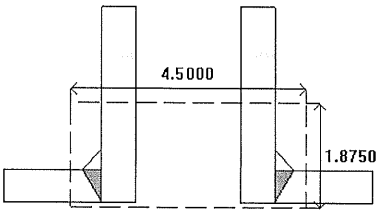
N13 (N13)

ASME Section VIII Division 1, 2010 Edition, A11 Addenda

$t_{w(lower)}$ = 0.625 in

Leg_{41} = 0.375 in



Note: round inside edges per UG-76(c)

Location and Orientation

Located on:	SHELL
Orientation:	60°
Nozzle center line offset to datum line:	136 in
End of nozzle to shell center:	41.625 in
Passes through a Category A joint:	No

Nozzle

Access opening:	No
Material specification:	SA-350 LF2 Cl 1 (II-D p. 18, ln. 10)
Inside diameter, new:	2 in
Nominal wall thickness:	0.655 in
Corrosion allowance:	0.125 in
Projection available outside vessel, Lpr:	7.12 in
Projection available outside vessel to flange face, Lf:	8 in
Local vessel minimum thickness:	0.625 in
Liquid static head included:	0.9205 psi
Longitudinal joint efficiency:	1

ASME B16.5-2009 Flange

Description:	NPS 2 Class 300 LWN A350 LF2 Cl.1
Bolt Material:	SA-193 B7 Bolt <= 2 1/2 (II-D p. 334, ln. 32)
Blind included:	No
Rated MDMT:	-55°F
(Flange impact tested to -50°F UCS-66(i) reduction of 140 °F applied (ratio = 0.2715).)	
(Flange rated MDMT = -155 °F Bolts rated MDMT per Fig UCS-66 note (c) = -55 °F)	
Liquid static head:	0.8844 psi
MAWP rating:	654.6 psi @ 302°F
MAP rating:	740 psi @ 70°F
Hydrotest rating:	1,125 psi @ 70°F
PWHT performed:	No

Notes

Sizing Basis:
Blocked Outlet Flow

Summataion method:
PSV sized per required area:
Areq = 002-PSV-01-1610E (G1 + L1)
Areq = (11.862 + 0.0037) in2
Areq = 11.865 in2

Required Capacity not calculated:
- Selected capacity is the max relieving capacity for this 'Q' size orifice (12.85 in2)

Process contained <1% liquid. Therefore sized as gas service PSV.

Orifice calculation for Pressure Differential - Flange Taps - Gas

Customer: Devon/WP
Tag: 002-FE-01-1610

Flow Rate	**50,000,000.00**	**Standard Cubic Feet/Day**
Differential Pressure	**27.98**	**kPa**
Operating Temperature	**43.00**	**Deg C**
Operating Pressure	**700.00**	**kPa (gauge)**
Base Specific Gravity	**0.77**	
Compressibility Factor:		
Zf	**0.97000**	
Pipe Diameter	**13.250**	**Inches**
Bore Diameter (approximate)	**8.625**	**Inches**
Beta (approximate)	**0.65094**	

Note: Values for the beta ratio are approximate, typically within
2% - 5% for gases and steam
1% for liquids
The ASME MFC-3M 1989 equation is used in this program. However, several equation factors are assumed and can directly affect the calculation results

Coefficient of Thermal Expansion:	*1.0*
Discharge Coefficient:	*0.6*
Base Temperature:	*60 Deg F (15.56 Deg C)*
Base Pressure:	*14.7 PSIA (101.3 kPa-A)*
Pressure Tap Location:	*Flange Tap*

Also, this program does not take into consideration two calculation variables - the Reynolds Number correction and the expansion factor.

If it is necessary to have a closely specified beta ratio, differential pressure, or flow rate, please consult your Daniel representative for assistance

Preliminary Calculation Tool

With our preliminary calculation tool, you can perform thermowell calculations per ASME PTC 19.3TW-2010 early in your design process. Enter the process fluid properties, piping specifications, and thermowell dimensions to check whether the thermowell passes the ASME standard requirements. With the ability to change inputs and perform iterative calculations, you can select the perfect thermowell design for your process.

Is your design finalized?

Access our R21 report for an official evaluation.

Heating and Ventilation System Design

System Description:

The heating and ventilation system for this building consists of the following equipment: one 850ACFM [401AL/s] continuously operating wall mounted exhaust fan tag #: 002-EF-01-1681. One 850ACFM [401AL/s] cooling/emergency wall mounted exhaust fan c/w remote thermostat tag #: 002-EF-01-1682. One 24x24 [610x610] inlet damper c/w 120V damper actuator set to 50% minimum position. One 70kW glycol unit heaters c/w remote thermostat. All equipment shall be rated for 575/3/60. All equipment shall be rated for operation in a Class I, Div 1 Group C&D area. All weather hoods shall be by the building vendor and c/w screen.

Ventilation:

Building is continuously ventilated by 002-EF-01-1681 and therefore under a constant negative pressure. Makeup air enters the building through the intake dampers which shall be set to 50% open minimum position.

Emergency Ventilation:

On a low level (AAH) gas detection signal (by others) the cooling/emergency fan 002-EF-01-1682 is also energized and the inlet damper is fully opened. Both fans running equates to 15ACH. Upon detection of high level (AAHH) amounts of gas, all equipment shall be shut down; see 'Controls' section below. The emergency ventilation sequence shall override the cooling ventilation sequence for the building.

Summer (cooling):

The cooling/emergency exhaust fan 002-EF-01-1682 works independently for additional cooling based on its own thermostat. When this fan is energized, the inlet damper is opened to 100%. Both fans work to ventilate and maintain the building below the max indoor design temperature of 89F [32C] during peak load conditions. Set 002-EF-01-1682's thermostat to 70F [21C] to keep the building cooler when the conditions permit.

Winter (heating):

During heating mode, the unit heater operates as required by its thermostat to maintain the min indoor design temperature of 59F [15C] during peak load conditions. The unit heaters are sized based on no internal equipment heat gains being present. Set the unit heater thermostat to 64F [18C] to keep the building warmer when the conditions permit.

Controls:

Design and supply of controls for the heating and ventilation system is not by Ener-Tech. ESB, fire shutdown, gas detection systems and the integrating controls for the heating and ventilation system are not by Ener-Tech. Sequence of operation described above is provided only as a guide to the controls designer and should not be interpreted as detailed engineering of this H&V system.

Notes:

1. HVAC system is designed based on the project spec; 407014-00120-00-HV-PHL-0001
2. Lighting load is based on 2W/sqft of floor space.
3. No equipment heat gains were given for this calculation. Air volume of fans were given and are based on ACH rate alone.
4. Building envelope assumed to be constructed to an "average" tightness as defined by ASHRAE.
5. 1ACH of infiltration allowed for in this calculation per spec.
6. Ventilation is based on one pre-selected, 850CFM fan which equal 7.6ACH for this building. Building pressure will fluctuate with wind pressure, door usage and the final tightness of the building envelope.
7. Heating requirements are based on ventilation and building losses with no internal equipment heat gains present.
8. Building volume is measured from the building drawings provided and represents the volume when the building is empty.
9. Calculation is based on the CLTD (cooling load temperature difference) method. Design parameters are inputed into a computer model and summarized here for clarity.

Area Classification of 5Blue Devon Compressed Cardium Gas Separator

For

002-BU-01-1600

Tarpon Energy Services Ltd.

February 2014

PERMIT TO PRACTICE SNOWDON CONSULTING INC. PERMIT NUMBER: P-7513

The Association of Professional Engineers, Geologists and Geophysicists of Alberta

Only valid for Rev. 1
Previous revision (Rev. 0)
confirmed By R.G Snowdon

Summary

The area classification for the 5Blue Devon Compressed Cardium Gas Separator 002-PK-01-1600 is Class I, Zone 2. This classification is justified on the basis of natural ventilation through the skid building being sufficient to dilute any fugitive emissions to less than 25% of the lower explosive limit of natural gas in the building. The building must be maintained so that no revisions that would impede the natural flow of air through the building will be permitted. This area classification evaluates the building and its piping only, and does not take into account any factors due to the ultimate location and placement of the skid.

Fugitive Emission Calculations

Emission rates have been calculated as per API Recommended Practice 505 using factors from the API Publication 4322 **Fugitive HydroCarbon Emissions from Petroleum Production Operations**, 1980. Emission factors from Table E-3 for Gas Plant Operations were used with the component counts assigned to Gas, Gas and Condensate, or Water plus Hydrocarbon.

All calculations are shown, and the classification as Zone 2 is substantiated.

Valve, flange, connection and shaft seal counts were made by reviewing the process and instrumentation drawings for the skid along with the material lists.

Airflow Calculations

Airflow calculations were made using equations from section 6.6.2.4.6 of API RP505. These equations are used to determine vent area to achieve 12 air changes per hour. As the separator skid requires far less than one air change per hour, the existing gable exhaust fans and low level louvers will be more than adequate for dilution of fugitive emissions.

Area Classification of Gas Separator

The attached calculation sheets show that adequate ventilation exists in the gas separator package provided that the vents and louvers are maintained in the open state. With adequate ventilation, it is appropriate to classify this building as Class I, Zone 2.

The placement of ventilation openings on opposite sides of the building is important to ensure a flow of air through the building without "short-circuiting" the airflow, that is, if all air vents were near a single corner of the building, then there may be a dead air space in the opposite end of the skid.

This skid also has combustible gas detection included, which will activate the exhaust fan system and move more than twelve air changes per hour through the building. This qualifies the building as an "adequately ventilated" building, which also enables a classification of Class I, Zone 2.

PROFESSIONAL ENGINEER
R. G. SNOWDON
FEB 09 2014

Appendix A – Area Classification Principles

Canadian Electrical Code

The Canadian Electrical Code requires special design and installation practices for electrical equipment that is to be installed in a hazardous area. Hazardous areas are defined in the code as Class I locations where flammable gases or vapours are or may be present in the air in quantities sufficient to produce explosive gas atmospheres; {CEC 18-004(a)}. Further, Class I locations are subdivided into Zone 0, Zone 1, and Zone 2 locations.

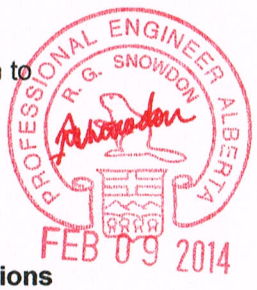
Areas where explosive atmospheres are continuously present or are present for long periods are Zone 0.

Areas adjacent to Zone 0 areas, or where explosive atmospheres are likely to occur in normal operation, or where explosive atmospheres exist frequently due to repair or maintenance operations or because of leakage are classified as Zone 1.

Areas where explosive gas atmospheres are not likely to occur in normal operation, and if they do occur will exist for a short time only are classified as Zone 2. This includes areas where:

- Gases are normally confined in closed systems from which they can escape only as a result of accidental rupture or breakdown, and
- Explosive atmospheres are normally prevented by adequate ventilation, but may occur as a result of failure of the ventilation system, and
- Areas adjacent to Zone 1 locations that do not have a positive pressure ventilation system to prevent communication of gas from the Zone 1 area.

In normal operations areas where gas may accumulate due to fugitive emissions from pressurized equipment, an adequate ventilation system may reduce the hazardous location to Zone 2.



American Petroleum Institute

RP 505, **Recommended Practice for Classification of Locations for Electrical Installations at Petroleum Facilities Classified as Class I, Zone 0, Zone 1 and Zone 2**, First Edition, references many concepts used in the NEC which compare closely to the Canadian Electrical Code (CEC). Other concepts include the amount of time in a year when a hazardous concentration of gas may exist. In 6.5.8.2 and 6.5.8.3, areas with hazardous concentrations of gas for 1000 or more hours per year would be Zone 0; between 10 and 1000 hours per year would be Zone 1, and less than 10 hours per year would be Zone 2. This is not, however, a hard and fast rule, and should be used as a guideline only as to an appropriate classification of a particular area.

Adequate ventilation is determined by calculating that amount of dilution required to keep the concentration of gas to 25% of the Lower Explosive Limit (LEL) and then to apply a further safety factor of 4 to the required airflow.

Alberta Oilfield Practice

In Alberta, the Electrical Protection Branch issued Oil and Gas Regulations that prescribed almost all oilfield buildings other than compressor buildings as Class I, Division 1. In the past 15 years or so, many designers have taken a more pro-active role in evaluating potential levels of

combustible gases, and classified many areas as Division 2, or Zone 2. The regulatory requirements are for a Professional Engineer to certify these area classifications with documentation. The approach most often taken is to do a fugitive emission study and evaluate the likely concentration of combustible gas that may arise. If the level is low enough, then a Division 2 or Zone 2 classification is used. The fugitive emission studies generally use factors for component leakages developed by the API.

For the purposes of this report, the calculation of "adequate ventilation" is based on fugitive emission factors published by the American Petroleum Institute in their publications listed in Appendix B.

VENTILATION CALCULATIONS (PER API RP 505):

CORRECTED IDEAL GAS MOLE VOL. @ AMBIENT TEMP & STD. PRESS. = 411.5 CU FT.

REQUIRED VENTILATION RATE Qr = G / (25 %LEL * MIN %LEL) = 9.622979 CFM.

MINIMUM AIR CHANGE REQUIRED = Q * 60 / BLDG VOLUME = 0.32 AIR CHANGE PER HOUR.

PREDICTED HYDROCARBON LEAK RATE G = (E * V) / (60 * AVERAGE mW) = 0.120287 CFM.

APPLY SAFETY FACTOR OF 4 TO OBTAIN THE RECOMMENDED VENT. RATE Q = 4 * Qr = 38.49 CFM.

CERTIFICATE OF COMPLIANCE TO INDUSTRY STANDARDS

The following is a partial list of design and manufacturing standards with which Balon Corporation has complied in the design and manufacturing of the referenced valves. Individual standards may apply to one or more valve styles, configurations and materials. Not every valve meets every standard.

API 6FA -	Specification for Fire Test for Valves
API Q1 -	Specification for Quality Programs for the Petroleum, Petrochemical and Natural Gas Industry
API 594 -	Check Valves: Wafer, Wafer-Lug and Double Flanged Type
API 6D -	Pipeline Valves
ASME / ANSI B1.2 -	Gages & Gaging for Unified Inch Screw Threads
ASME / ANSI B1.20.1 -	Pipe Threads, General Purpose (Inch)
ASME / ANSI B16.10 -	Face-to-Face and End-to-End Dimensions of Valves
ASME / ANSI B16.25 -	Buttwelding Ends
ASME / ANSI B16.34 -	Valves – Flanged, Threaded and Welding End
ASME / ANSI B16.5 -	Pipe Flanges and Flanged Fittings NPS ½ through NPS 24 Metric/Inch Standard
ASME / ANSI B31.3 -	Process Piping
ASME / ANSI B31.8 -	Gas Transmission and Distribution Piping Systems
MSS SP-25 -	Standard marking System for Valves, Fittings, Flanges and Unions
NACE MR 0175 -	Petroleum and Natural Gas Industries – Materials for Use in H_2S-containing Environments in Oil and Gas Production

LETTER OF COMPLIANCE

for:

GROVE BRAND TRUNNION VALVES

Model B4, B5 - Sour Low Temperature Service

Cameron Valves & Measurement hereby certifies that the design, manufacture, sampling, testing and quality control inspection of the GROVE brand CSA Z245.15 ball valves for Sour Low Temperature Service meet the requirements of CSA Z245.15-09 Sour Service, V&M Engineering Standards, and customer purchase order requirements. As part of compliance to these specifications, the valves are marked in accordance with MSS SP-25. The valves are also marked "SOUR" as required by CSA Z245.15 marking requirements for Sour Service and are suitable for use in CSA Z662 Pipeline systems.

The materials of construction for these valves conform to the metallurgical requirements of NACE MR0175/ISO 15156:2003 (Parts 1 & 2 for Carbon & Alloy Steels in SSC Region 3 Sour Service and Parts 1 & 3 for CRA's as specified in CSA Z245.15 Chapter 13). According to NACE MR0175-2003/ISO 15156, it is the customer's / user's responsibility to ensure that the valve materials will be satisfactory in the intended service.

The minimum service temperature of these valves is -46°C/-50°F. Impact testing has been performed in accordance with applicable ASTM requirements and those of CSA Z245.15 for Category II M45C Service.

The ASTM A320 Grade L7M studs and capscrews and ASTM Grade A194 7ML nuts used in the products specified above have been Quality Control inspected and meet the requirements of the applicable ASTM specifications – as is already implied fully by the statements above regarding both CSA and NACE standards compliance.

Subject: DynaSeal 310 Ball Valves
Letter of Compliance

Cameron Valves & Measurements offers this Letter of Certification that DynaSeal 310 Ball Valves conform to the following standards:

A) NACE MR-01-75/ISO 15156 requirements for sour oil and gas applications, when supplied with the following trims:

Valve Size	Body Trim Code	Ball & Stem Trim Code
¼" Through 4" x 3"	CS2, CS3, S8	S2
4"F Through 14" x 12"	CS2, CS3, S8	S1
4"F Through 8"x6" Cl600	CS1, CS2	S2

Bolting in ¼" through 4" x 3" CS2 and CS3 valves is modified for use in full exposure NACE service. Sizes 4" F through 14" x 12" are supplied with bolting for use in NACE service providing it is not subjected to full exposure NACE (i.e. buried or insulated). If buried Nace bolting is required, prices are on application. S8 trim full stainless valves have B8 stainless steel bolting suitable for buried NACE service.

B) Firesafe to API 607 4th edition requirements, when supplied with the following trims:

2 piece design, in sizes 1/4" thru 4"x 3" with seal codes 01, 42, 43, 18, 48, and 60S.
4" full bore and larger with seal codes 01, 42, and 28 (trim 43 in class 600).
Socket weld end 3 piece valves with trim 48.

C) All 4"R and smaller 310 ball valves are marked with B16.34 on the nameplate/body except the 2"FP and 3"RP 3000psi threaded end 310C5. This valve only meets B16.34 with a max pressure rating of 2000psi but is tested in accordance with the requirements of B16.34. All 4" F and larger valves are in compliance with the requirements but none are marked.

If you have any questions, please contact your Cameron Valves & Measurement Sales Representative or the ball valve quotations department at the address shown above.

Sincerely,

Kevin Nix

All Velan valves are tested in accordance with specification required by the design. Valves designed to API specifications API 594, API 600, API 602, API 603, API 608 and API 609 are tested to API 598. Valves designed to B16.34 are tested to B16.34 and MSS-SP-61.

This report is issued by a computerized system and is valid without signature. The chemical and mechanical reports and testing criteria for the customer selected heat code are validated by Velan. All header info on this certificate (including customer name, valve description, figure number and quantity) has been supplied by the user of the VelCert application.

There are no deviations from test methods unless noted. It should not be assumed that mechanical properties of raw material heat treated to a fastener standard will have the same properties of a finished fastener whose original material characteristics may have been significantly altered.

No mercury was used/added and no welding/weld repair was performed on this material while in the possession of TC Industries, Inc.

ACM Machining Inc. hereby certify that all test results and process information contained in this report are correct and true as contained in the records of the company and meet purchase order and or specification requirements.

I hereby certify that the content of this report is correct and accurate, and that all tests and operations performed on this material were in compliance with applicable material specifications and purchaser designated requirements.

Garrett Bouyett - Rolling Mill Metallurgist

Any alteration to this report voids Steel Dynamic's warranting of results. No weld repair has been performed on this material. This material is not radioactive and has not been exposed to radioactivity while under the control of Steel Dynamics. This material has not been exposed to mercury while under the control of Steel Dynamics. Unless otherwise noted, this material was melted, continually cast, and rolled in the USA; w/ all testing performed by Steel Dynamics.

QIUBAO VALVE CO.,LTD.
ENP INSPECTION REPORT

Customer Name	VALGRO	Production Name	BALL 12"150/900	Report No.	A44525
P.O. NO.	4503584136	Production Material	LF2	Inspection Date	1/5/2013
Draw No.	9K-292F12032	Production Quantity	10PCS	Heat Treatment	400℃/1hour
Part No.	9K-292-12032-8(03)	Carry out Standard	9K-VG-6 REV.03	Batch No.	QB8417

Inspection Process Description

1.Adhesion Test

Adhesion test as per ASTM B571 the sample was bend at 180 degree over a mandrel of Same size as sample. No peeling was observed.

2.Porosity Test

Ferroxyl test carried out as per ASTM B733 9.6.1 standard to check for porosity. None were found.

3.Visual Test

The job was inspected for visual defect like peeling, blistering etc. None were found.

4.Thickness Test

The thickness was measured on coupon and was found to be 0.025-0.031mm with thickness testing machine.

5.Composition Test

The job were plated with E.N.P having average phosphorus content of 10.63% and remaining being nickel.

6.Hardness Test

Hardness after plating average ≥850HV at 100 gm load.

Conclusion	(√)Conformity ( )Non-Conformity

LETTER OF COMPLIANCE

for:

GROVE BRAND TRUNNION VALVES

Model B4, B5 - Sour Low Temperature Service

Cameron Valves & Measurement hereby certifies that the design, manufacture, sampling, testing and quality control inspection of the GROVE brand CSA Z245.15 ball valves for Sour Low Temperature Service meet the requirements of CSA Z245.15-09 Sour Service, V&M Engineering Standards, and customer purchase order requirements. As part of compliance to these specifications, the valves are marked in accordance with MSS SP-25. The valves are also marked "SOUR" as required by CSA Z245.15 marking requirements for Sour Service and are suitable for use in CSA Z662 Pipeline systems.

The materials of construction for these valves conform to the metallurgical requirements of NACE MR0175/ISO 15156:2003 (Parts 1 & 2 for Carbon & Alloy Steels in SSC Region 3 Sour Service and Parts 1 & 3 for CRA's as specified in CSA Z245.15 Chapter 13). According to NACE MR0175-2003/ISO 15156, it is the customer's / user's responsibility to ensure that the valve materials will be satisfactory in the intended service.

The minimum service temperature of these valves is -46°C/-50°F. Impact testing has been performed in accordance with applicable ASTM requirements and those of CSA Z245.15 for Category II M45C Service.

The ASTM A320 Grade L7M studs and capscrews and ASTM Grade A194 7ML nuts used in the products specified above have been Quality Control inspected and meet the requirements of the applicable ASTM specifications – as is already implied fully by the statements above regarding both CSA and NACE standards compliance.

VELAN

Certificate of Conformance

Certificate #: P4-133631

Velan hereby certifies that the valve(s) described above is (are) in conformance with the purchase order and specification requirements. The test report represents the actual attributes of items furnished and all test results are in full conformance with applicable specification and purchase order requirements.

LETTER OF COMPLIANCE

for:

GROVE BRAND TRUNNION VALVES

Model B4, B5 - Sour Low Temperature Service

Cameron Valves & Measurement hereby certifies that the design, manufacture, sampling, testing and quality control inspection of the GROVE brand CSA Z245.15 ball valves for Sour Low Temperature Service meet the requirements of CSA Z245.15-09 Sour Service, V&M Engineering Standards, and customer purchase order requirements. As part of compliance to these specifications, the valves are marked in accordance with MSS SP-25. The valves are also marked "SOUR" as required by CSA Z245.15 marking requirements for Sour Service and are suitable for use in CSA Z662 Pipeline systems.

The materials of construction for these valves conform to the metallurgical requirements of NACE MR0175/ISO 15156:2003 (Parts 1 & 2 for Carbon & Alloy Steels in SSC Region 3 Sour Service and Parts 1 & 3 for CRA's as specified in CSA Z245.15 Chapter 13). According to NACE MR0175-2003/ISO 15156, it is the customer's / user's responsibility to ensure that the valve materials will be satisfactory in the intended service.

The minimum service temperature of these valves is -46°C/-50°F. Impact testing has been performed in accordance with applicable ASTM requirements and those of CSA Z245.15 for Category II M45C Service.

The ASTM A320 Grade L7M studs and capscrews and ASTM Grade A194 7ML nuts used in the products specified above have been Quality Control inspected and meet the requirements of the applicable ASTM specifications – as is already implied fully by the statements above regarding both CSA and NACE standards compliance.

There are no deviations from test methods unless noted. It should not be assumed that mechanical properties of raw material heat treated to a fastener standard will have the same properties of a finished fastener whose original material characteristics may have been significantly altered.

No mercury was used/added and no welding/weld repair was performed on this material while in the possession of TC Industries, Inc.

This original test report displays a raised "TC Industries Test Center" seal. This test report relates only to the items tested and shall not be reproduced, except in full, without the written permission of TC Industries Test Center

All Velan valves are tested in accordance with specification required by the design. Valves designed to API specifications API 594, API 600, API 602, API 603, API 608 and API 609 are tested to API 598. Valves designed to B16.34 are tested to B16.34 and MSS-SP-61.

This report is issued by a computerized system and is valid without signature. The chemical and mechanical reports and testing criteria for the customer selected heat code are validated by Velan. All header info on this certificate (including customer name, valve description, figure number and quantity) has been supplied by the user of the VelCert application.

REMARKS

1. The above stated **ksi** values have been calculated based on original tested **N/MM²** values
2. *RE = Ni + Cr +Mo+ V + Cu

CERTIFIED THAT

1. THE ABOVE GIVEN DETAILS ARE CORRECT
2. THE MATERIAL CONFORMS TO ABOVE SPECIFICATION.
3. THE MATERIAL IS FREE OF CONTAMINATION FROM RADIOACTIVE ELEMENT OR RADIATION

THE PARTS WERE MANUFACTURED/TESTED IN ACCORDANCE WITH THE ABOVE SPECIFICATION AND CERTIFIED IN ACCORDANCE WITH EN 10204-3.1

Prepared by	Checked by

CERTIFICATE OF CONFORMANCE OF RECORDING INSTRUMENTS

CERTIFIED BY:	R & R Stress Relieving Service Ltd.
TEST NUMBER:	RR0813
DATE:	August 8, 2013
DATE DUE:	November 8, 2013
INSTRUMENT MFG:	Chino
MODEL NUMBER:	AH-3725 N00
SERIAL NUMBER:	AH-059C172
RECORDER NUMBER:	IR-182

This instrument has been calibrated and it is within the manufacturers specifications.

REFERENCE STANDARDS

DIGI MITE 311600 S/N48430-5522 CERT DATE Oct 22/12

The calibration of all standards and measuring instruments used in the calibration are traceable to the National Research Council of Canada in Ottawa or to the National Bureau of Standards in Washington, D.C.

Heat Treatment Instructions

P.O:	10445	CUSTOMER :	Canalta Controls Ltd.
DESCRIPTION:	Canalta Meter Tubes. *Note: Please add Protech to all Threads.		
DATE:	OCTOBER / 22 / 2013	Contractor:	R+R Stress Relieving

COMPONENT DESCRIPTION:

DWG. NO. AND LINE NO.	DIAMETER	THICKNESS	MATERIAL	LENGTH	WEIGHT
6 BLUE PROCESS, RP#6451#1, 1430#FDC40, D140012, T140004, (4 Piece)	14	0.438 & 1.5	WCB	286"	Approx. 13,106 Lbs
CB ENGINEERING, RP#6497#1, 860#FB0, P008, (3 Piece)	8.625	0.5	A333 / A350	200"	Approx. 12,175 Lbs

Temperature to be raised from (800°F)(427°C) to (1150°F)(621°C) at a maximum rate of **(266°F) (130°C)** Per Hour.

NOTE: MUST NOT EXCEED (400 °F) (204 °C) Per Hour.

Calculated rate = 400 degrees F/hr. (204 °C / hr.) Divided by governing metal thickness.

Temperature to be held at 1150°F (621°C) Plus or minus 25°F (14°C) For **(90)** minutes: 1 hr for items < 1" thick;

1hr + 15min per 1/4" in excess of 1" for items 1"- 2" thick; 2hrs + 15min/inch in excess of 2" (Refer to table for thickness)

Temperature to be lowered from (1150°F)(621°C) to (800°F)(427°C) at a maximum rate of **(333°F)(167°C)** Per Hour.

NOTE : MUST NOT EXCEED **(333°F)(167 °C)** Per Hour.

Calculated rate = **333°F** / hr. **(167°C** / hr.) Divided by governing metal thickness.

Additional requirements:

- **Job number and description required on heat treatment charts along with the operator's signature & date.**
- **Reporting of thermocouple attachment method and location, and verification of furnace thermocouple calibration is required.**
- **A sufficient number of thermocouples shall be located to control and maintain uniform distribution of temperature on all vessels and parts. Thermocouples shall be directly attached to the item or provision shall be made for thermocouple placement at bottom, centre and top of the furnace charge in accordance with the ASME Code.**
- **If Capacitator discharge welding is used to attach thermocouples an ASME Section IX welding procedure is required (WPS qualification is not required), and the energy output must be limited to 125 Watt-Seconds. No other welding is permitted on vessels or parts. [0.5 X Capacitance in farads X Voltage² = W-Sec.]**

Thermocouple Attachment Method : CAPACITOR DISCHARGE

Furnace Heat Number : B F 3 2 - 1 3 - 6 2 8 Location(s) TC's placed on meter runs at front and back
